It was a 3.7-liter inline four-cylinder engine that produced 170 horsepower, a powerful alternative to the 160- and 165-horsepower six-cylinder Mercury engines. The 470 featured a cast aluminum engine block designed by Mercury Marine, the name Kiekhaefer's company had taken in 1969, and the block was mated with an iron cylinder head from the Ford 460 V-8 engine.

I have 1986 Mercruiser 170 (mdl MCM 170) w/ 2 battery system. This may be a dumb question, I'm not a mechanic. My volt meter reads 12.3 on each battery when engine is not running and 12.2 after I started it. Does this mean my charging system is not working? Any help or advice is appreciated.-- tem
