Examine alternative techniques for dealing with post-traumatic stress disorder Trauma Treatment Techniques: Innovative Trends examines alternative approaches to “talk” therapies that help relieve stress in trauma survivors. Experts in a range of practice areas present mental health providers with methods that augment or go beyond traditional techniques, including art therapy, virtual reality, humor, residential programs, emotional freedom techniques (EFT), traumatic incident reduction (TIR), and thought field therapy (TFT). This unique book serves as a primer on new and creative means of working with combat veterans, survivors of child abuse, victims of rape and other violent crimes, refugees, victims of terrorism, and disaster survivors. Since the late 19th century, mental and medical health professionals, social workers, clinicians, and counselors have attempted to help patients mitigate symptoms and reduce distress by employing a variety of treatment techniques, methods, strategies, and procedures. Trauma Treatment Techniques: Innovative Trends represents a significant addition to the available literature on post-traumatic stress disorder (PTSD) and acute distress, providing therapists with much-needed options in their efforts to help trauma sufferers recover, find new meaning, and reach for new hopes and happiness. Trauma Treatment Techniques: Innovative Trends examines: debriefing interventions in school settings instructions and safeguards for using emotional freedom techniques (EFT) when debriefing in disaster situations the use of creative art therapies to reach out to war refugees the use of virtual reality-based exposure therapy (VRE) to desensitize Vietnam veterans with PTSD from traumatic memories humor as a healing tool repressed memory physiology and meridian treatment points in the body a six-step methodology for diagnosing PTSD a 90-day residential program for treatment of PTSD PTSD motivation enhancement (ME) groups autism as a potential traumatic stressor and much more Trauma Treatment Techniques: Innovative Trends is an invaluable resource of inventive techniques that offer hope for recovery to anyone who has suffered life’s worst injuries.

A modern communication network can be described as a large, complex, distributed system composed by higher interoperating, smaller sub-systems. Today, the proliferation and convergence of different types of wired, wireless, and mobile networks are crucial for the success of the next generation networking. However, these networks can hardly meet the requirements of future integrated-service networks, and are expected to carry multimedia traffic with various Quality of Experience (QoE) and Quality of Service (QoS) requirements. Providing all relevant QoS/QoE issues in these heterogeneous networks is then an important challenge for telecommunication operators, manufacturers, and companies. The impressive emergence and the important demand of the rising generation of real-time Multi-service (such as Data, Voice VoD, Video-Conference, etc.) over communication heterogeneous networks, require scalability while considering a continuous QoS. This book presents and explains all the techniques in new generation networks which integrate efficient global control mechanisms in two directions: (1) maintain QoS requirements in order to maximize network resources utilization, and minimize operational costs on all the types of wired-wireless-mobile networks used to transport traffic, and (2) mix the QoS associated with home, access, and core networks in order to provide Quality of Service/Quality of Experience expected by users of new services.
