Crosslinguistic Influence and Second Language Learning provides a comprehensive overview of what is currently known about prior language knowledge and experience in second language learning. Three bodies of research are critically reviewed to achieve this goal: (i) theories of language learning that attribute critical roles to prior experience in explaining second language development, (ii) empirical studies of second language learning that have investigated roles for crosslinguistic influence, and (iii) instructional studies that have supported second language learning by addressing the negative effects of crosslinguistic influence. Using this foundation, new research directions and theorization in the field of second language acquisition are proposed. This book will serve as an excellent resource for students and scholars with interests in (instructed) second language learning, applied linguistics, cognitive psychology, psycholinguistics, and language education.

Current Developments in Biotechnology and Bioengineering: Sustainable Bioresources for the Emerging Bioeconomy outlines recent advances in bioenergy, biorefinery and the bioeconomy, an essential element for a 21st century bio-based society. The book provides information on biomass and various conversion technologies with different parameters that affect the conversion process. Sections cover different bioproducts, biorefinery systems, energy and greenhouse gas emission balances of bioenergy and biorefinery, and environmental and economic footprints of bioeconomy. Finally, different strategies adopted by developed and developing countries for the promotion and implementation of a bioeconomy concept for a bio-based society are systematically covered. The book provides comprehensive information starting from early progress to the latest trends on bioenergy, biorefinery and bioeconomy with special reference to the developed and the developing countries and the linkage between bioeconomy and climate change mitigation in simple scientific language to appeal to a wider audience. Includes the fundamentals and concepts of biomass and bioenergy Outlines recent technology development for biomass conversion Provides concept for different bioproducts Covers global strategies and policies on the development of bioeconomies

Mobilities within the European Union (EU) have changed significantly since the classical intra-regional migrations of the 1950s –1970s. After a period of reduced, less visible flows in the 21st century mobilities increased again, first linked to EU expansion towards the East, and from 2008, with renewed South-North flows following the impact of the Great Recession on Southern European countries. It is in this context that the current volume explores how these recent migrations reflect new and more complex patterns of mobility, increasingly uncertain and unstable, involving both natives and naturalised migrants. It also seeks to unpack the multiple connections between these new migration systems and other systems affecting social protection, gender and citizenship, and how these intersect with other factors such as class, age, race and ethnicity. The different chapters of the book examine this covering a wide variety of cases, including intra-EU flows from Portugal and Spain, recent Spanish and Latin American migrants in London, Paris and Brussels, and Romanian migration to the UK and France, thus adding to its richness. This book will be of interest to academics, researchers and advanced students of Sociology, Anthropology, Geography, Gender Studies, Public Policy, and Politics. It was originally published as a special issue of Ethnic and Racial Studies.

Most people understand that regulations have a direct bearing on their access to things such as clean air and water and safe working environments. However, in the United States, few people make the connection between how legal services are regulated and how difficult it is for them to access legal services. Indeed, on the question of affordable and accessible civil justice, the World Justice Project ranks the US 94th out of 113 countries, behind Albania, Belarus, Myanmar, and Russia. For decades academics and others have debated whether the legal profession is self-regulated and, if it is, whether it should be. But is it the right debate? Self-regulation—or not—does not obviate the need for effective regulation. Independent, accountable, and transparent regulatory bodies, effective oversight of those bodies, the genuine engagement of citizens in the regulatory process, evidence-based research to fully assess the impact of regulation, and an approach to regulation that is proportionate and targeted to actual risks are essential for effective regulation. Through the lens of the adoption of alternative structures, this book explains how England, Wales, and Australia have, by embracing these essential elements, successfully modernized their regulatory environments for legal services, and how Canada has taken firm steps down its own path to the same. In contrast, by rejecting these elements, the United States remains paralyzed in an unproductive regulatory environment for legal services. This book provides a blueprint for how the US can take inspiration from its common law sisters to breathe new life into its regulatory environment for legal services. Ultimately, modernization will require more—and better—regulation that is financed publicly through equitable, progressive revenue sources.

Digital devices, such as smart phones and tablet computers, are becoming commonplace in young children ' s lives for play, entertainment, learning and communication. Recently, there has been a great deal of focus on the educational potential of these devices in both formal and informal educational settings. There is now an abundance of educational ' apps ' available to children, parents, and teachers, which claim to enhance children ' s early literacy and numeracy development, but to date, there has been very little formal investigation of the educational potential of these devices. This book discusses the impact on children ' s learning when iPads were introduced in three very different early years settings in Brisbane, Australia. It outlines how researchers worked with pre-school teachers and parents to explore how iPads can assist with letter and word recognition, the development of oral literacy and digital literacies and talk around play. Chapters consider the possibilities for using iPads for creativity and arts education through photography, storytelling, drawing, music creation and audio recording, and critically examine the literacies enabled by educational software available on iPads, and the relationship between digital play and literacy development. iPads in the Early Years provides exciting insights into children ' s digital culture and learning in the age of the iPad. It will be key reading for researchers, research students and teacher educators focusing on the early years, as well as those with an interest in the role of ICTS, and particularly tablet computers, in education.

This exciting new textbook introduces students to the key aspects of the law and legal frameworks essential for social work practice in Australia. Simple and easy to read, it communicates the complex legal concepts in practice in ways students can easily understand. With a focus on human rights and ethical conduct, it's both concept based, examining the ways of thinking and understanding law and social work interactions, and topic based, exploring the different specific areas of law which social workers are most likely to come into contact with. This is essential reading for any student taking a unit in Social Work Law. Specific to Australia, it accounts for Australian jurisdictions, and can be easily integrated into the classroom context, with case studies,

questions for discussion and links to further resources, including interactive resources and a website to support further learning and provide updates to changes in the law between editions.

This book carries out a comparative study of the US response to popular uprisings in the Middle East as an evaluation of President Barack Obama ' s foreign policy commitments. In 2009, Obama publicly pledged " a new beginning in US-Muslim relations, " causing eager expectation of a clear shift in US foreign policy after the election of the 44th president of the United States. However, the achievement of such a shift was made particularly difficult by the existence of multiple, and sometimes conflicting, US interests in the region which influenced the Obama administration ' s response to the popular uprisings in five Muslim-majority countries: Egypt, Bahrain, Yemen, Libya, and Syria. After providing a detailed analysis of the traditional features of both US foreign policy rhetoric and practice, this book turns its focus to the Obama administration ' s response to the 2011 Arab Awakening to determine whether Obama ' s foreign policy has indeed brought about a new beginning in US-Muslim relations.

The deep ocean is by far the planet's largest biome and holds a wealth of potential natural assets. Human exploitation of the deep ocean is rapidly increasing whilst becoming more visible to many through the popular media, particularly film and television. The scientific literature of deep-sea exploitation and its effects has also rapidly expanded as a direct function of this increased national and global interest in exploitation of deep-sea resources, both biological (e.g. fisheries, genetic resources) and non-biological (e.g. minerals, oil, gas, methane hydrate). At the same time there is a growing interest in deep-sea contamination (including plastics), with many such studies featured in high profile scientific journals and covered by global media outlets. However, there is currently no comprehensive integration of this information in any form and these topics are only superficially covered in classic textbooks on deep-sea biology. This concise and accessible work provides an understanding of the relationships between biodiversity and ecosystem functioning, both at the seafloor and in the water column, and how these might be affected as a result of human interaction, exploitation and, ultimately, environmental change. It follows a logical progression from geological and physical processes, ecology, biology, and biogeography, to exploitation, management, and conservation. Natural Capital and Exploitation of the Deep Ocean is aimed at marine biologists and ecologists, oceanographers, fisheries scientists and managers, fish biologists, environmental scientists, and conservation biologists. It will also be of relevance and use to a multi-disciplinary audience of fish and wildlife agencies, NGOs, and government departments involved in deep-sea conservation and management.

Africa finds itself at the centre stage of world politics in the twenty-first century. To truly determine its rising influence and role in world affairs would mean unravelling the politics of imperialism, the Cold War and globalisation. Going beyond Euro-American perspectives, this book presents a comprehensive study of Africa and its role in world politics. Africa in World Affairs: • Closely examines the transition of Africa in its colonial and post-colonial phases; • Explores the intellectual history of modern Africa through liberation struggles, social movements, leaders and thinkers; • Investigates the continent ' s relationships with former colonial powers such as Britain, France and Portugal; untangles complexities of French neo-colonialism and sheds light on the role of the superpower, such as the USA and major and rising powers like China and India; • Highlights complex and wide-ranging diversities of the region, and the ways in which it continues to negotiate with issues of modernity, racism and globalisation. A core text on Africa and the world, this book will be indispensable for students of African studies, politics and international relations, and history. It will also be a must-read for policymakers, diplomats and government think tanks.
