Is life insurance a bad investment? Don't I lose all my cash value when I die? Shouldn't I just make a bundle and invest it instead? What about my spouse or my kids-do they need life insurance? Can I borrow money from (or is it against?) a life insurance policy? My insurance advisor told me one thing about insurance, but my financial planner gave me different advice, and an expert on TV said something else entirely. What do I do now? Help! Every day, people like you and me run into questions like these-and no good answers. The truth about life insurance is that myths, misunderstandings, and even outright lies cause a lot of uncertainty around what it is, how it works, who needs it and when, and-most importantly-the great benefits it can bring to your life. This book is here to clear up all that confusion. With combined experience of over fifty years in the life insurance industry, Kim Butler and Jack Burns know what's true and what isn't. They've seen what works and what fails. They've lived through every success and failure the industry can throw at them. And they're fed up with seeing smart, well-meaning people fall for costly half-truths and mix-ups because they just can't find the right information. Busting The Life Insurance Lies takes the 38 biggest, loudest myths around life insurance and breaks them wide open. Whether you're wondering if life insurance is right for you, wanting to understand how it can help you while you're still alive, or even an insurance advisor yourself, this book will guide you to the answers you need to make the clearest, most informed decision-one you'll feel good about for the rest of your life.

Despite intense political focus and debate for the past 10 years, Americans remain deeply worried about the availability and affordability of health care for themselves and their families. In clear and accessible prose,

File Type PDF 4 Myths About Auto Insurance Rates Are You Getting Ripped Off How To Lower Your Car Insurance Premiums

journalist Ryan Holeywell and medical doctor and health policy expert Arthur Garson provide Americans with the tools we need to have an honest, unbiased view of the state of health care policy in America. By fact checking 20 enduring health care myths they move the debate beyond Obamacare v. repeal and replace and give citizens the tools they need to evaluate the major policy issues confronting our health care system.

An Engaging and Accessible Overview of Crime and Justice in America For all their interest in crime, most Americans know very little about the reality of crime and the criminal justice system in the United States and most of what Americans do know is a loose collection of accumulated truths, half-truths, and outright fallacies. *Myths and Realities of Crime and Justice: What Every American Should Know, Second Edition* provides a concise but thorough overview of criminal behavior, crime, and the criminal justice system in the United States. Using up-to-date social science research to debunk many of the beliefs Americans hold about crime, the book examines key topics such as serial killers and mass murders, gun violence, criminal victimization, identity theft, policing and police corruption, plea bargaining, jury nullification, wrongful convictions, the death penalty, and the CSI Effect. The fully revised and updated second edition of this popular text includes the most recent crime and criminal justice data, and covers several recent high-profile crimes, including the Newtown shooting, the Jerry Sandusky case, and the Trayvon Martin case. It also includes new sections on recent trends in crime rates, street gangs, and hate crimes. Ideally suited for students in criminal justice programs as well as professionals who work within or in tandem with the criminal justice system, *Myths and Realities of Crime and Justice: What Every American Should Know, Second Edition* is a thorough, engaging, and highly relevant portrait of crime and justice in America."

Financial struggles of American families are headline news. In communities across the nation, families feel the pinch of stagnant and sometimes declining incomes. Many have not recovered from the Great Recession, when millions lost their homes and retirement savings. They are bombarded daily with vexing financial decisions: Which bills to pay? Where to cash checks? How to cover an emergency? How to improve a credit report? How to bank online? How to save for the future? Low- and moderate-income families have few places to turn for guidance on financial matters. Not many can afford to pay a financial advisor to help navigate an increasingly complex financial world. They do their best with advice from family and trusted individuals. Social workers, financial counselors, and human services professionals can help. As "first responders," they assist families and help in finding financial support from public and private sources. But these professionals are too often unprepared to address the full range of financial troubles of ordinary working families. *Financial Capability and Asset Building in Vulnerable Households* prepares social workers, financial counselors, and other human service professionals for financial practice with vulnerable families. Building on more than 20 years of research, the book sets the stage with key concepts, historical antecedents, and current financial challenges of families in America. It provides knowledge and tools to assist families in pressing financial circumstances, and offers a lifespan perspective of financial capability and environmental influences on financial behaviors and actions. Furthermore, the text details practice principles and skills for direct interventions, as well as for designing financial services and policy innovations. It is an essential resource for preparing the next generation of practitioners who can enable families to achieve economic security and development.

Liberal media outlets vilify the natural health movement but give Big Pharma a pass. That's not accidental. That's intentional. Once seen as rare diseases, cancer and autoimmune diseases are now chronic and debilitating. Obesity is permanently part of Western-European (WE) society. Mental health conditions are now a regular part of life. Why is our society like this? Is there a cure? Why do WE governments continue their war against marijuana? Why are millions of people drugging themselves to sleep with pharmaceutical drugs? Can you be free of cancer and autoimmune diseases without Big Pharma? Is there meaning and purpose to your pain and lack of health? You'll find the answers to all of these questions in Part IV.

On the public roads boy racers are a foreboding presence, viewed with suspicion and derision by the ' respectable ' motorist. The problem of the young (male) driver is one which has plagued authorities and governments due to youths ' acclaimed propensity to engage in deviant and dangerous driving behaviours. Boy Racer Culture sheds light on the boy racer phenomenon through ethnographic research with the notorious ' Bouley Basher ' culture in the city of Aberdeen, Scotland, and the moral panic on the part of outside groups including the local community, police, politicians and media. This book examines the creation of masculine and feminine identities in a traditionally male-dominated subculture through car-related rituals such as ' modding ', subcultural media and events, and the quest for celebrity status via public performances. Boy Racer Culture challenges common misconceptions surrounding the boy racer, the ' problematic ' young (male) motorist and the car modifier. It will be essential reading for an international audience including sociologists and criminologists, particularly those with an interest in youth culture, subcultures, moral panics, car culture, anti-social behaviour, and the governance and policing of the roads.

The world is on the precipice of energy innovation. As we strive toward cleaner fuels, some technologies will rise and others will fall. Will the Tesla Roadster and the Nissan Leaf go the way of the 1890s ' Morrison Electric? The new rock stars of the transportation industry are radical entrepreneurs with visions that may change the landscape of energy as drastically as computers changed the landscape of communication. Electric vehicles (EVs) are steadily gaining acceptance. Countries like Norway, France, India, and China have stated that they will abandon sales and manufacturing of conventional vehicles by 2025 – 2030 in favor of EVs. Eberhart 's expert book provides everything we need to know to engage in the debate over EVs versus internal combustion vehicles. He skillfully sorts fact from fiction, puts valuable research at our finger tips, and offers us a glimpse of what the world might look like in 2050 with a potential worldwide population of 9.6 billion people and over 530 million EVs on our roads. The future has never seemed more like science fiction. We 've seen hydrogen fuel-cell-powered trains (" hydrail "), autonomous drones, the first prototypes and working models of electric jets, and vertical takeoff and landing (VTOL) vehicles. Uber promised to lift intercity EVs to the sky with its Elevate program, and smaller startups have demonstrated ingenious contraptions for human-powered flight. Eberhart envisions a successful energy revolution where we learn from our mistakes and solve our puzzles, as we work toward a future that allows us to be conscientious, powerful, and energy-savvy all at the same time. Are EVs really the holy grail of energy solutions—power without fossil fuel? Are EVs here to stay?
