The denominator of the rational exponent is the index of the radical. There will be times when working with expressions will be easier if you use rational exponents and times when it will be easier if you use radicals. In the first few examples, you ' ll practice converting expressions between these two notations.

~~Simplify Rational Exponents — Intermediate Algebra~~

Rational Expressions - Multiply & Divide. Multiplying and dividing rational expressions is very similar to the process we use to multiply and divide fractions.

Example 1. $15 \sqrt[4]{9} \cdot 14 \sqrt[4]{5}$

First reduce common factors from numerator and denominator (5 and 7) $3 \sqrt[7]{7} \cdot 2 \sqrt[9]{9}$

Multiply numerators across and denominators across $6 \sqrt[6]{63}$ Our Solution The process is identical for division with the extra first step of multiplying by the reciprocal.
