Physics Problems With Frictional Force and Acceleration Acceleration Problems  
You end up with time squared in the denominator just because it ' s velocity divided by time — that ' s something you

# Read Book Acceleration Problems

get used to when solving physics problems. In other words, acceleration is the rate at which your velocity or speed changes because rates have time in the denominator. So for acceleration, you can expect to see units of meters per second <sup>2</sup>, or centimeters per second <sup>2</sup>, or miles per second <sup>2</sup>, or feet per second <sup>2</sup>, or even kilometers per hour <sup>2</sup>.

A problem about a car (US version). A car is

# Read Book Acceleration Problems

said to go "zero to sixty in six point six seconds". What is its acceleration in  $\text{m/s}^2$ ?  
The driver can't release his foot from the gas pedal (a.k.a. the accelerator).

Acceleration - Problems – The Physics Hypertextbook

Solution: If the velocity is uniform, let us say

# Read Book Acceleration Problems

$V$ , then the initial and final velocities are both equal to  $V$  and the definition of the acceleration gives. average acceleration =  $\frac{V - V}{t - t_0} = 0$ . The acceleration of an object moving at a constant velocity is equal to 0.
