The Oxford Guide to the Romance Languages is the most exhaustive treatment of the Romance languages available today. Leading international scholars adopt a variety of theoretical frameworks and approaches to offer a detailed structural examination of all the individual Romance varieties and Romance-speaking areas, including standard, non-standard, dialectal, and regional varieties of the Old and New Worlds. The book also offers a comprehensive comparative account of major topics, issues, and case studies across different areas of the grammar of the Romance languages. The volume is organized into 10 thematic parts: Parts 1 and 2 deal with the making of the Romance languages and their typology and classification, respectively; Part 3 is devoted to individual structural overviews of Romance languages, dialects, and linguistic areas, while Part 4 provides comparative overviews of Romance phonology, morphology, syntax, semantics and pragmatics, and sociolinguistics. Chapters in Parts 5-9 examine issues in Romance phonology, morphology, syntax, syntax and semantics, and pragmatics and discourse, respectively, while the final part contains case studies of topics in the nominal group, verbal group, and the clause. The book will be an essential resource for both Romance specialists and everyone with an interest in Indo-European and comparative linguistics.

The second edition features: a CD with all of the book's Amos, EQS, and LISREL programs and data sets; new chapters on importing data issues related to data editing and on how to report research; an updated introduction to matrix notation and programs that illustrate how to compute these calculations; many more computer program examples and chapter exercises; and increased coverage of factors that affect correlation, the 4-step approach to SEM and hypothesis testing, significance, power, and sample size issues. The new edition's expanded use of applications make this book ideal for advanced students and researchers in psychology, education, business, health care, political science, sociology, and biology. A basic understanding of correlation is assumed and an understanding of the matrices used in SEM models is encouraged.
