This edition of Robert Sedgewick's popular work provides current and comprehensive coverage of important algorithms for Java programmers. Michael Schidlowsky and Sedgewick have developed new Java implementations that both express the methods in a concise and direct manner and provide programmers with the practical means to test them on real applications.

Algorithms, 4th Edition by Robert Sedgewick and Kevin Wayne

This fourth edition of Robert Sedgewick and Kevin Wayne's Algorithms is the leading textbook on algorithms today and is widely used in colleges and universities worldwide. This book surveys the most important computer algorithms currently in use and provides a full treatment of data structures and algorithms for sorting, searching, graph processing, and string processing—including fifty algorithms every programmer should know.

in an intermediate-level introduction to algorithms course. The chapters for this book are organized to provide a pedagogical path that starts with the basics of Java programming and object-oriented design. We then discuss concrete structures in-cluding arrays and linked lists, and foundational techniques like algorithm analysis and recursion.

Sedgewick, Algorithms in Java, Parts 1-4 | Pearson

Introduction to Sorting Algorithms in Java. To sort the information in a certain order, often within an array-like framework, is to arrange them. You can use different sequence requirements, popular ones are the sorting of numbers from least to biggest or vice versa, or lexicographically sorting strings. We will cover different algorithms, from ineffective but intuitive alternatives through to efficient algorithms effectively implemented in Java and in other languages if you are interested ...
