Describes the social characteristics of ants, including what jobs different ants have, explains the layout of a nest, and compares the behaviors of different ant species.

Did you know that for every human on earth, there are about one million ants? They are among the longest-lived insects—with some ant queens passing the thirty-year mark—as well as some of the strongest. Fans of both the city and countryside alike, ants decompose dead wood, turn over soil (in some places more than earthworms), and even help plant forests by distributing seeds. But while fewer than thirty of the nearly one thousand ant species living in North America are true pests, we cringe when we see them marching across our kitchen floors. No longer! In this witty, accessible, and beautifully illustrated guide, Eleanor Spicer Rice, Alex Wild, and Rob Dunn metamorphose creepy-crawly revulsion into myrmecological wonder. Emerging from Dunn's ambitious citizen science project Your Wild Life (an initiative based at North Carolina State University), Dr. Eleanor's Book of Common Ants provides an eye-opening entomological overview of the natural history of species most noted by project participants—and even offers tips on keeping ant farms in your home. Exploring species from the spreading red imported fire ant to the pavement ant, and featuring Wild's stunning photography, this guide will be a tremendous resource for teachers, students, and scientists alike. But more than this, it will transform the way we perceive the environment around us by deepening our understanding of its littlest inhabitants, inspiring everyone to find their inner naturalist, get outside, and crawl across the dirt—magnifying glass in hand.

Summarizes two decades of research on ants conducted in the Arizona desert in a revolutionary re-examination of how ant society is organized, how individual members make decisions, and how a colony evolves.

“In Mr. Wilson ants have found not only their Darwin but also their Homer.” —Economist In *Tales from the Ant World*, two-time Pulitzer Prize winner Edward O. Wilson takes us on a thrilling myrmecological tour across continents and through time, inviting us into his decades-long scientific obsession with ants. Animating his observations with personal stories, Wilson hones in on twenty-five ant species to explain how these creatures talk, smell, taste, and crucially, how they fight to determine dominance. Richly illustrated throughout with depictions of ant species and photos from Wilson's own expeditions, *Tales from the Ant World* is a fascinating personal account from one of our greatest scientists—and a necessary volume for any lover of the natural world.
