American Shino: The Glaze of a Thousand Faces: Richter ...

Shino has since become one of the more popular glazes in American pottery studios. Many variations have spawned from Wirt ' s original formula. Although many different colorants and fluxes can be added, creating a wide range of effects, Shino glazes in America are all characterized by the use of soda ash and by a high ratio of alumina to silica. Under certain firing conditions, the soda ash causes carbon to be trapped in the glaze, creating the characteristic grey spots or patches on the ...

American Shino: The Glaze of a Thousand Faces - Lester ...

Layering glazes is a great way to explore a wide variety of fired surface possibilities. Add an American shino glaze to the combination with an important caution, however. Here ' s why. Definitions. Glaze Crawling: The term that describes a fired glaze that has pulled apart, leaving islands of thickened glaze and bare clay surface beneath. Crawling occurs while the glaze is molten because the surface tension of the liquid is stronger than the bond between the glaze and the clay it has been ...

Techno File: The Shino Myth - Ceramic Arts Network

Shino glaze (志野釉 Shino uwagusuri?) is a generic term for a family of pottery glazes. They tend to range in color from milky white to orange, sometimes with charcoal grey spotting, known as "carbon trap" which is the trapping of carbon in the glaze during the firing process.[1] The term also refers to Japanese pottery made with the Shino glaze (see Shino-yaki).

Shino glazes are distinctive in their ability to trap ...

Then in the 1970s, an American student developed her take on the historic Shino glaze, which has become known as the American Shino. The varieties of color found with Shino glaze range from milky white to bright orange, and occasionally grey. These glazes use soluble soda ash and spodumene to create different effects during firing such as spotting and variations with color and texture.

All About Shino - Stone Leaf Pottery | Denver, Colorado

Shino traditionally refers to a style of glazing from the Mino and Seto regions of Japan. They appear to have a milky white appearance to them, but many modern shinos include colored pigments that add more depth to the color while keeping their earthy look.

50 Nepheline Syenite. 25 Ball Clay. 25 Spodumene. 0-2 Soda Ash. I formulated this glaze by studying quite a few American potters' shino recipes. I began by testing many recipes and noting both likes and dislikes of each glaze test. Noticing patterns, it became obvious to me that I really enjoyed a shino that included the ingredient Spodumene.

Favorite Glazes – Phillip Schmidt Pottery

Shino: A glaze that is most commonly associated with Japanese aesthetics. The original Japanese recipe includes ground high-alumina, high-sodium feldspar and local clay. Most American recipes are derivations of Virginia Wirt's work in the '70s (a student of Warren MacKenzie) and include a blend of soda ash, spodumene, feldspar, and clay.
