Life is a humbling experience, it has to be learned looking backwards from our past mistakes but to be lived looking forward!! Through it all I have learned to be grateful to be alive and acknowledged my errors. My life began in Durban, KwaMashu township. I was born in a very large family of twelve. That is unthinkable by today's standards and I'm still wondering how our parents managed to feed all of us, to clothe and generally to take care of all of us.

Through 25 chapters authored by some of the leading researchers in the field, the Human Resources Development Review 2008 provides an extensive overview of the contextual factors driving human resources development in South Africa. A key theme throughout the volume is the importance of a multi-faceted skills development strategy operating at three levels. The first entails high-skills policies aimed at expanding export-oriented manufacturing production and services provision, particularly in new globally competitive 'niche' areas. The second relates to the economy's ongoing need for intermediate skills, as is evident in the shortage of skilled artisans and technologists. Finally, the provision of basic, entry-level skills is important in view of the urgent need for large-scale job creation schemes, triggered by public sector initiatives, to ameliorate high levels of unemployment and despondency, especially amongst the youth.

This book provides comprehensive information on South Africa, how it operates, how the systems work and where to find further information if required. A useful tool for those living within South Africa as well as for tourists needing information.

This book was developed in order to deliver a unit standards-based curriculum that is in line with the National Qualifications-Framework (NQF).

A compelling and disquieting journey through the history and science of epidemics. For centuries mankind has waged war against the infections that, left untreated, would have the power to wipe out communities, or even entire populations. Yet for all our advanced scientific knowledge, only one human disease - smallpox - has ever been eradicated globally. In recent years, outbreaks of Ebola and Zika have provided vivid examples of how difficult it is to contain an infection once it strikes, and the panic that a rapidly spreading epidemic can ignite. But while we chase the diseases we are already aware of, new ones are constantly emerging, like the coronavirus that spread across the world in 2020. At the same time, antimicrobial resistance is harnessing infections that we once knew how to control, enabling them to thrive once more. Meera Senthilingam presents a timely look at humanity's ongoing battle against infection, examining the successes and failures of the past, along with how we are confronting the challenges of today, and our chances of eradicating disease in the future.

HEALTH, SAFETY, AND NUTRITION FOR THE YOUNG CHILD, 9th Edition, covers contemporary health, safety, and nutrition needs of infant through school-age children--and guides teachers in implementing effective classroom practices--in one comprehensive, full-color volume. Concepts are backed by the latest research findings and linked to NAEYC standards. The book emphasizes the importance of respecting and partnering with families to help children establish healthy lifestyles and achieve their learning potential. Early childhood educators, professionals, and families will find the latest research and information on many topics of significant concern, including food safety, emergency and disaster preparedness, childhood obesity, children's mental health, bullying, resilience, chronic and acute health conditions, environmental quality, and children with special medical needs. Also provided are easy-to-access checklists, guidelines, and activities that no early childhood student or professional should be without.
