Trade integration contributes substantially to economic development and poverty alleviation. In recent years much progress was made to liberalize the trade regime, but customs procedures are often still complex, costly and non-transparent. This situation leads to misallocation of resources. 'Customs Modernization Handbook' provides an overview of the key elements of a successful customs modernization strategy and draws lessons from a number of successful customs reforms as well as from customs reform projects that have been undertaken by the World Bank. It describes a number of key import procedures, that have proved particularly troublesome for customs administrations and traders, and provides practical guidelines to enhance their efficiency. The Handbook also reviews the appropriate legal framework for customs operations as well as strategies to combat corruption.

This book was written in the context of new and innovative policies for customs and tax administration reform. Eight chapters describe how measurement and various quantification techniques may be used to fight against corruption, improve cross-border celerity, boost revenue collection, and optimize the use of public resources. More than presenting “ best practices ” and due to the association of academics and practitioners, the case studies explore the conditions under which measurement has been introduced and the effects on the administrative structure, and its relations with the political authority and the users. By analyzing the introduction of measurement to counter corruption and improve revenue collection in Cameroon, two chapters describe to which extent the professional culture has changed and what effects have been noted or not on the public accountability of fiscal administrations. Two other chapters present experiments of uses of quantification to develop risk analysis in Cameroon and Senegal. By using mirror analysis on the one hand and data mining on the other hand, these two examples highlight the importance of automated customs clearance systems which collect daily extensive data on users, commodities flows and officials. One chapter develops the idea of measuring smuggling to improve the use of human and material resources in Algeria and nurture the questioning on the adaptation of a legal framework to the social context of populations living near borders. Finally, two examples of measurement policies, in France and in South Korea, enlighten the diversity of measurement, the specificities of developing countries and the convergences between developing and developed countries on common stakes such as trade facilitation and better use of public funds.

The Asian Development Bank, under the South Asia Subregional Economic Cooperation program, is helping Maldives implement a robust domestic and regional trade system. This integrated trade network facilitates seamless movement of goods and documents, across organizational and national boundaries, and will vastly improve the business environment and overall economic activity. This publication outlines key blockchain use cases recommended for implementation in Maldives for trade facilitation. A feasibility study conducted from April to July 2019 established the use cases of blockchain technology to facilitate cross-border trade and improve operational performance of domestic trade processes in Maldives.

Africans Investing in Africa explores intra-African trade and investment by showing how, where and why Africans invest across Africa; to identify the economic, political and social experiences that hinder or stimulate investment; and to highlight examples of pan-African investors.

A technical assistance (TA) mission on external sector statistics (ESS) was conducted in The Valley, Anguilla, during March 27–31, 2017. This was the first mission to Anguilla carried out as part of the Caribbean Regional Technical Assistance Centre (CARTAC) work program on external sector statistics (ESS) and in response to requests from the Anguilla Statistics Department (ASD) of Anguilla ' s Ministry of Finance, Economic Development, Commerce, Tourism, Land & Physical Planning (MFED).¹ The purpose of the mission was to assist the ASD in strengthening the compilation and dissemination of ESS. This is intended to facilitate a

robust assessment of external sector developments and policy impact. Reliable ESS are essential for informed economic policy-making by the authorities.

The three regional economic communities (RECs) in Eastern and Southern Africa are the Common Market for Eastern and Southern Africa (COMESA), the East African Community (EAC) and the Southern African Development Community (SADC). Together, they have recognised the need to work towards regional cooperation aimed at the eventual creation of a single regional economic community or Tripartite Free Trade Agreement (TFTA). This will replace the existent RECs in Eastern and Southern Africa to which the member states of these two regions have multiple membership. The TFTA region comprises a total of 27 member states which have a combined population of 527 million people and a combined gross domestic product (GDP) of USD 624 billion. These statistics translate into a potential regional economic powerhouse for Eastern and Southern Africa. One of the major goals of the TFTA is to harmonise trade arrangements among the three RECs, improve the movement of goods and persons within the single integrated region, facilitate the joint implementation of regional infrastructure projects and enhance co-operation of member states. This is a laudable initiative by the member states of the three RECs and it is recognised that regional integration is the first step towards integration into a multilateral trading system. For the TFTA member states, it is crucial that there is an awareness to move towards a review of domestic customs legislation and policy and to develop regional, supranational legislation and regulations in order to gain a stronger competitive edge in the global market. This study shies away from proposing a „quick fix or „instant benefit to the harmonisation of

Get Free Asycuda World Customs

TFTA member states customs legislative frameworks and policies and the development of a single automated, interoperable electronic customs system. Rather, it places its focus on long-term sustainable benefits which will be realised over time. The harmonisation of TFTA member state customs legislative policies and the resultant Information and Communications Technology (ICT) reforms to the customs processes of the TFTA member states, though not immediate or short-term, will strategically position the region to conduct business in an increasingly volume driven, fast paced, electronic global economy.

This paper outlines reforms that have been achieved in the modernization of the customs administrations of francophone sub-Saharan (African) countries since the mid-1990s. It also highlights the remaining issues in this process. Progress has been made in the automation of operations and procedures, with constant and significant efforts to strengthen revenue collection and improve trade facilitation in a number of countries. However, the pace and scope of modernization remains insufficient, particularly in developing customs control and enforcement capacities, and enhancing operational resources and management. The findings suggest that the authorities' strong commitment to reform, organizational and management changes, adequate technical assistance and project management, and effective implementation of modern customs standards, are critical to accelerate the modernization of customs in francophone sub-Saharan Africa.

The three regional economic communities (RECs) in Eastern and Southern Africa are the Common Market for Eastern and Southern Africa (COMESA), the East African Community

immediate or short-term, will strategically position the region to conduct business in an increasingly volume driven, fast paced, electronic global economy.

This paper, based on the considerable practical experience of the IMF ' s Fiscal Affairs Department, sets out a successful strategy for modernizing customs administration. The essence is to establish transparent and simple rules and procedures, and to foster voluntary compliance by building a system of self-assessment supported by well-designed audit policies. Having set out this strategy--and its benefits--the paper discusses in depth what is required in terms of trade policy, valuation procedures, dealing with duty reliefs and exemptions, controlling transit movements, organizational reform, use of new technologies, private sector involvement, and designing incentive systems for an effective customs administration.
