Normally, the XS engine is enabled by default in an SAP HANA system. In some cases, particularly with SAP HANA Express, the XS engine is not enabled by default, and you may need to activate the XS engine manually. The XS engine is enabled separately for the system database and for each tenant database.

Enable the XS Engine (XS Classic) - SAP Help Portal

XS Engine allows for the creation of applications on HANA using only HANA and a front-end application library like SAPUI5. No separate application server is necessary. More specifically, XS Engine is a JavaScript application server based on the Mozilla SpiderMonkey engine. This is the same engine used in the Firefox Web browser.

What is the SAP HANA XS Engine and how does it work?

Yamaha XS650 Engine Stand | TC Bros. Choppers

The XS 650s valves are operated by a single overhead camshaft (SOHC) whereas almost all contemporaries in its class have pushrod valvegear. The 360 degrees crankshaft uses three roller bearings and a ball bearing. The camshaft uses four ball bearings, and rolling bearings are used throughout the rest of the

engine.

XS650 Engines

A rephase is when you change the configuration of a crank or camshaft to change the time an engine fires. Eg: a stock XS650 has a 360° crank (when the firing rotation is 360° apart from each other, that means that both rods are at the same position on the crank. 180° would mean they are at opposite sides). A rephase on an XS650 is usually at ...
