This book is an authentic multidimensional history of the car industry in China. 40 years, attempts were made to change the status quo, such as breaking the 220% tariff barrier and setting limits when opening up to international car companies. It was not until the beginning of the 21st century that ordinary people in China started to own cars. This led to rapid growth of the Chinese car industry since the 21st century. However, the industry is facing its biggest challenge due to conflict between China's economic and social values. The author, as a media person chronicling cars in China, has witnessed, experienced, and even participated in the development process of the industry. Weaving in juicy tales, interesting details, and rare pictures, the readers are taken on an exhilarating ride through the story of cars in China.

The aim of this volume is to provide deep insights and the latest scientific developments and trends in experimental economics. Derived from the 2015 Computational Methods in Experimental Economics (CMEE) conference, this book features papers containing research and analysis of economic experiments concerning research in such areas as management science, decision theory, game theory, marketing and political science. The goal is to present possibilities for using various computer methods in the scope of experimental economics to further provide researchers with a wide variety of tools. The field of experimental economics is rapidly evolving. Modern use of experimental economics requires the integration of knowledge in the domains of economic sciences, computer science, psychology, and neuroscience. Recent research includes experiments conducted both in the laboratory and in the field, and the results are used for testing and a better understanding of economic theories. Researchers working in this field use mainly a set of well-established methods and computer tools that support the experiments. Methods such as artificial intelligence, computer simulation and computer graphics, however, are not represented enough in experimental economics studies and most experimenters do not consider their usage. The goal of the conference and the enclosed papers is to allow for an exchange of experiences and to promote joint initiatives to insight change in this trend.
