Video-over-IP is a method through which video services are delivered from one device to another that is connected to the internet. Nowadays, most of the video content providers host their services ...

Video-Over-IP: Definition & Characteristics | Study.com

There are primarily two reasons why users consider using Audio over IP today: Flexibility in signal routing Low cost - the small audio industry borrows technology from the much larger IT industry that has already been debugged and commoditised over many years, this greatly reduces the cost of devices such as network switches.

Overview - RAVENNA IP-based Media Network

Audinate licence other manufacturers to use the DANTE system, so as a result, there are (as of Autumn 2015) over 500 products with integrated DANTE compatible hardware, from over 170 manufacturers. The multiple channels are combined by multiplexing prior to transmission, audio is uncompressed, latency is low and may be set by the user. the system may be used in the presence of other IP traffic.
