Based on methods of actual product developments from Goodyear Aerospace and Hewlett-Packard, this engrossing book provides specific guidelines plus a wealth of data for rapid and efficient development of new products using a systems theory which works vertically through an industry's management structure and horizontally across functions that contribute to new product development. Demonstrates how to integrate the best available tools with appropriate techniques and how to deliver new products within performance objectives and budget. An abundance of checklists, data and reference material enable readers to implement the methods presented.

Where presidents or members of affluent families were previously seen, it is increasingly the case that car manufacturers are owned by banks and investment funds which have taken control of the entire economic life of these firms. This has significant impact on the terms of employment and layoffs, wages and precarious work, growing inequalities in income strata, compensation levels for executives, and the implementation of short-termist strategies across business operations. This book explores this increasing financialization - the predominance of the financial sector over the productive sector - in the automotive industry. In particular it is shown that the financial operations of these companies through leasing, insurance, loans, and other financial instruments is now much more profitable than the manufacturing aspects of the business, which was originally the raison d'être for these firms. The chapters demonstrate how there are great demands to increase the return to shareholders as a main concern, despite other metrics and/or other stakeholders. The work studies the impact of financialization at the world's five largest automakers which together represent almost 50% of car production, providing an exploratory analysis of profitability, shareholder composition, compensation to executives, workers' salaries, dividend payments to shareholders, and employment. Encouraging debate on contemporary economy, this book marks a significant addition to the literature on financialization, contemporary forms of capitalism, labour and economic sociology more broadly.

English abstracts from Kholodil'naia tekhnika.

Green Energy Economies offers insight into the major drivers that are shaping a new future powered by clean energy sources. Assembling cutting-edge researchers as contributors, the book provides a comprehensive account of the shift underway, examining in detail the complexities and intricacies involved with such a transition. The book first details the promises and problems of a green energy transition. Next, it explores the economic benefits that a comprehensive strategy toward a green energy economy might create. Then it investigates how communities will be affected and explores the social, cultural, and other changes that are likely to result. Finally, it explores the shift toward new technologies in-depth. Green Energy Economies concludes with policy options that support a transition to a better energy, environmental, and economic future. The contributors argue that a green energy economy offers great promise, but its realization will require making hard choices, and soon. They argue for investments in renewable energy and economic systems that can deliver a sustainable and equitable future. This book makes a forceful case for a green future.

BLACK ENTERPRISE is the ultimate source for wealth creation for African American professionals, entrepreneurs and corporate executives. Every month, BLACK ENTERPRISE delivers timely, useful information on careers, small business and personal finance.

Vol. for 1955 includes an issue with title Product design handbook issue; 1956, Product design digest issue; 1957, Design digest issue.

"Nobody asked you to show up." Every experienced product manager has heard some version of those words at some point in their career. Think about a company. Engineers build the product. Designers make sure it has a great user experience and looks good. Marketing makes sure customers know about the product. Sales get potential customers to open their wallets to buy the product. What more does a company need? What does a product manager do? Based upon Product School's curriculum, which has helped thousands of students become great product managers, The Product Book answers that question. Filled with practical advice, best practices, and expert tips, this book is here to help you succeed!

Prof. Jürgens is renowned for his scientific work in such fields as human resources, work organization and organization of production and development, especially for automotive industries. In this publication, authors from different countries discuss models of integration in development and production as realized in practice. Of interest to those practitioners who need to develop benchmarks for their own development and production.
