The stomach of birds consists of the proventriculus, isthmus, and ventriculus or the gizzard. It lies on cranial left side of the thoracoabdominal cavity. Since birds do

Download Free Avian

not have a diaphragm, it is termed the abdominal coelom. The proventriculus is the proximal portion and is the glandular portion that secretes the digestive enzymes.

A bird has paired kidneys which are connected to the lower gastrointestinal tract through the ureters. Depending on the bird species, the cortex makes up around 71-80% of the kidney's mass, while the medulla is much smaller at about 5-15% of the mass. Blood vessels and

Download Free Avian

Other tubes make up the remaining mass.

Bird anatomy -
Wikipedia

Cuttlefish or cuttles are marine molluscs of the order Sepiida. They belong to the class Cephalopoda, which also includes squid, octopuses, and nautiluses. Cuttlefish

Download Free Avian

have a unique internal shell, the cuttlebone, which is used for control of buoyancy.. Cuttlefish have large, W-shaped pupils, eight arms, and two tentacles furnished with denticulated suckers, with which they secure their prey.
