AWS Lambda - Developer Guide

[AWS Lambda Documentation](#). With AWS Lambda, you can run code without provisioning or managing servers. You pay only for the compute time that you consume!there's no charge when your code isn't running. You can run code for virtually any type of application or backend service!all with zero administration. Just upload your code and Lambda takes care of everything required to run and scale your code with high availability.

[AWS Lambda](#) is a compute service that lets you run code without provisioning or managing servers. [AWS Lambda](#) executes your code only when needed and scales automatically, from a few requests per day to thousands per second. You pay only for the compute time you consume - there is no charge when your code is not running.

What is AWS Lambda? - AWS Lambda

By combining [AWS Lambda](#) with other [AWS services](#), developers can build powerful web applications that automatically scale up and down and run in a highly available configuration across multiple data centers ï with zero administrative effort required for scalability, back-ups or multi-data center redundancy.

AWS Lambda ï Serverless Compute - Amazon Web Services

The [AWS Serverless Application Model \(AWS SAM\)](#) is an open-source framework that you can use to build serverless applications on [AWS](#). A serverless application is a combination of [Lambda functions](#), event sources, and other resources that work together to perform tasks. Note that a serverless application is more than just a [Lambda function](#)!it can include additional resources such as [APIs](#), [databases](#), and event source mappings.

What is the AWS Serverless Application Model (AWS SAM ...

[AWS IoT Greengrass](#) developers can use [AWS Lambda functions](#) and prebuilt connectors to create serverless applications that are deployed to devices for local execution. The following diagram shows the basic architecture of [AWS IoT Greengrass](#). [AWS IoT Greengrass](#) makes it possible for customers to build IoT devices and application logic.

What is AWS IoT Greengrass? - AWS IoT Greengrass

An event source is an [AWS service](#) or developer-created application that produces events that trigger an [AWS Lambda function](#) to run. Some services publish these events to [Lambda](#) by invoking the cloud function directly (for example, [Amazon S3](#)).

AWS Lambda ï FAQs

For more information, see the [AWS Lambda Developer Guide](#). You can subscribe a [Lambda function](#) to an [SNS topic](#). [AWS Identity and Access Management \(IAM\)](#) helps you securely control access to [AWS resources](#) for your users. Use [IAM](#) to control who can use your [Amazon SNS topics](#) (authentication), what topics they can use, and how they can use them ...

What is Amazon SNS? - Amazon Simple Notification Service

This guide focuses on using [AWS AppSync](#) to create and interact with data sources by using [GraphQL](#) from your application. Developers who want to build applications using [GraphQL](#) with robust database, search, and compute capabilities, can find the information they need to build an application or integrate existing data sources with [AWS AppSync](#) in the [AWS AppSync Developer Guide](#).

Welcome - AWS AppSync

[AWS Lambda](#) runs your code on a high-availability compute infrastructure and performs all of the administration of the compute resources, including server and operating system maintenance, capacity provisioning and automatic scaling, code monitoring and logging. All you need to do is supply your code in one of the languages that [AWS Lambda](#) supports (currently [Node.js](#), [Java](#), [C#](#), [Go](#) and [Python](#)).
