state the key
principles behind
balancing chemical

equations: 1. You
cannot destroy atoms.

The total number of
atoms on each side of
the equation must be
the same. The
number of atoms of
each element must
therefore be the same
on each side of the
equation. 2. You

When balancing
equations, remember
chemical reactions
must satisfy

conservation of mass.

Check your work to
make certain you
have the same
number and type of
atoms on the
reactants side as on
the products side. A
coefficient (number in
