Enabling the Business of Agriculture 2016 provides a tool for policy makers to identify and analyze legal barriers for the business of agriculture and to quantify transaction costs of dealing with government regulations. Building on an earlier progress report published in November 2014, this volume presents the main results for 40 countries, for the first time using indicator scores to showcase good practices among countries in different stages of agricultural development. It also presents interesting results on the relationship between efficiency and quality of regulations, discriminatory practices in the laws, and whether regulatory information is accessible. Regional, income-group, and country-specific trends and data observations are presented on six topics: seed, fertilizer, machinery, finance, markets, and transport. The report also discusses the continued development of several topics that will be added in future reports: information and communication technology, land, water, livestock, gender, and environmental sustainability.

Is it time to embrace the so-called " Anthropocene " —the age of human dominion—and to abandon tried-and-true conservation tools such as parks and wilderness areas? Is the future of Earth to be fully domesticated, an engineered global garden managed by technocrats to serve humanity? The schism between advocates of rewilding and those who accept and even celebrate a " post-wild " world is arguably the hottest intellectual battle in contemporary conservation. In Keeping the Wild, a group of prominent scientists, writers, and conservation activists responds to the Anthropocene-boosters who claim that wild nature is no more (or in any case not much worth caring about), that human-caused extinction is acceptable, and that " novel ecosystems " are an adequate replacement for natural landscapes. With rhetorical fists swinging, the book ' s contributors argue that these " new environmentalists " embody the hubris of the managerial mindset and offer a conservation strategy that will fail to protect life in all its buzzing, blossoming diversity. With essays from Eileen Crist, David Ehrenfeld, Dave Foreman, Lisi Krall, Harvey Locke, Curt Meine, Kathleen Dean Moore, Michael Soul é , Terry Tempest Williams and other leading thinkers, Keeping the Wild provides an introduction to this important debate, a critique of the Anthropocene boosters ' attack on traditional conservation, and unapologetic advocacy for wild nature.
