Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand.We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Biology : The Unity and Diversity of Life.

Authors Cecie Starr, Christine A. Evers, and Lisa Starr partnered with the National Geographic Society to develop this Tenth Edition of BIOLOGY: CONCEPTS AND APPLICATIONS. Renowned for its clear writing style and unparalleled visuals, this trendsetting book applies exclusive National Geographic content to engage students and emphasize that biology is an ongoing endeavor carried out by a diverse community of scientists. Each chapter explores core concepts aligned with the American Association for the Advancement of Science (AAAS) initiative "Vision and Change in Undergraduate Biology Education" to help students master associated learning objectives. By continuously challenging students to question what they read and to apply the concepts they learn, Starr and the accompanying MindTap hone critical thinking skills as students gain scientific literacy.

Designed for the one-semester human biology course, this full-color manual offers activities for 23 laboratory sessions in a variety of formats to allow the instructor to customize these exercises to the needs of their course. The lab manual's depth of coverage invites students to explore fundamental concepts of human biology in a laboratory setting.
