Megan McCafferty is the author of the Jessica Darling books, hands-down my all-time favorite contemporary series. The dystopian novel BUMPED is a huge departure from her legacy, but if you tone down your instinctual desire to compare it to the Jessica Darling books, it is a fantastically complex story that will provide fodder for thought for multiple rereads.

Bumped by Megan McCafferty This book was crazy good. The writing is just stunning at times. BUMPED is the story of twins-separated at birth, Melody and Harmony, in a near-future where a sterility virus makes it impossible to get pregnant past 18 years of age. Most of the novel hinges on a single day of mistaken identity, a day that changes both twins' lives.

This book lays the foundations for an exciting new area of research in descriptive set theory. It develops a robust connection between two active topics: forcing and analytic equivalence relations. This in turn allows the authors to develop a generalization of classical Ramsey theory. Given an analytic equivalence relation on a Polish space, can one find a large subset of the space on which it has a simple form? The book provides many positive and negative general answers to this question. The proofs feature proper forcing and Gandy–Harrington forcing, as well as partition arguments. The results include strong canonization theorems for many classes of equivalence relations and sigma-ideals, as well as ergodicity results in cases where canonization theorems are impossible to achieve. Ideal for graduate students and researchers in set theory, the book provides a useful springboard for further research.
