The new 5th edition of this bestselling text, used by nearly 25,000 students in over 50 different countries, retains its practical yet strong theoretical approach and is now updated to include new material on integrated reporting and CSR communications.

The Ever-Changing Mold of Modern Business Communication. Business Communication Today continually demonstrates the inherent connection between recent technological developments and modern business practices.

"This book aims to provide theoretically ambitious but accessible information devoted to a major field within communication and media studies: Financial Communication and Investor Relations . The book sets out to ground and orientate the student through a broad range of specially commissioned chapters, while also providing the more experienced scholar and teacher with a convenient and comprehensive overview of the latest trends and critical directions"--

This contributed volume provides new approaches, fresh ideas, valuable insights, and latest research in leadership—from strategic business (model) innovation to system design and humanity—and is a knowledge source and inspirational guide for scientists and practitioners alike. A key theme is the provision of an integrated perspective on leadership in strategy and communication which allow (senior) leaders, managing directors, project managers, and individuals to (1) better link strategic business innovation and leadership and (2) shift to the new human self-leadership paradigm and in particular leadership advances that consider ideas from multiple disciplines and transgenerational views. That includes a new understanding about knowledge, learning and change and how leaders re-discover and develop their human abilities, which include intuition/strength, balance and clarity, projection-reflection, and wisdom. This volume also makes an important contribution to the evolving academic domain by providing the latest insights on trauma research, DNA healing, system (re)design, and growth & abundance mindset in the advanced co-creation age.

Employee engagement (or a lack thereof) can often be linked to poor communication and a detachment from company goals. Companies of all sizes are looking for ways to boost communication, recognizing its impact on key business outcomes, such as productivity and profitability. This book offers fresh insights about opportunities to improve the quality of employee communications based on employees' needs. It highlights the importance of simple, jargon-free communication that focuses on dialogue and content. High-performing organizations are more likely to think about communication from the audience perspective, rather than purely from the management perspective. The case studies offer readers a firm understanding of ways to implement and measure communication in daily practice. Effective communication requires planning and this book, with its focus on the US, Latin America, and emerging markets, will guide readers in using communication in the alignment of corporate and employee needs.

Getting hired quickly isn't as easy as it once was. While the traditional cause of unemployment is grouped under the heading of a "bad economy," there now exists a new impediment to getting hired: online recruitment. Why has Internet job hunting or online recruitment made it so much harder to getting hired? Before the widespread use of online recruitment, employers usually received a handful of job applicants per job posting. Today, it's quite common for employers to obtain 200 applicants per job posting! With increased competition, the difficulty of getting hired increases. You can overcome the roadblocks that online recruitment places in your path to a new job. The goal of this book is to teach you a simple, divide-and-conquer method that will help you use online recruitment successfully. In addition, it will also teach you how to write a highly searchable online résumé and how to correct problems when they arise in your job search campaign.

Artificial intelligence (AI) technologies are one of top investment priorities in these days. They are aimed at finding applications in fields of special value for humans, including education. The fourth industrial revolution will replace not only human hands but also human brains, the time of machines requires new forms of work and new ways of business education, however we must be aware that if there is no control of human-AI interaction, there is a risk of losing sight of this interaction's goal. First, it is important to get people to truly understand AI systems, to intentionally participate in their use, as well as to build their trust, because "the measure of success for AI applications is the value they create for human lives" (Stanford University 2016, 33). Consequently, society needs to adapt to AI applications if it is to extend its benefits and mitigate the inevitable errors and failures. This is why it is highly recommended to create new AI-powered tools for education that are the result of cooperation between AI researchers and humanities and social sciences researchers, who can identify cognitive processes and human behaviors. This book is authored by a range of international experts with a diversity of backgrounds and perspectives hopefully bringing us closer to the responses for the questions what we should teach (what the "right" set of future skills is), how we should teach (the way in which schools should teach and assess them) and where we should teach (what implications does AI have for today's education infrastructure). We must remember as we have already noticed before "...education institutions would need to ensure that they have an appropriate infrastructure, as well as the safety and credibility of AI-based systems. Ultimately, the law and policies need to adjust to the rapid pace of AI development, because the formal responsibility for appropriate learning outcomes will in future be divided between a teacher and a machine. Above all, we should ensure that AI respect human and civil rights (Stachowicz-Stanusch, Amann, 2018)".

This Handbook provides new perspectives on humour from transdisciplinary perspectives. It focuses on humour as a resource from different socio-cultural and psychological viewpoints and brings together authors from different cultures, social contexts and countries. The book will enable researchers and practitioners alike to unlock new research findings which give new directions for contemporary and future humour research. By employing transdisciplinary and transcultural perspectives, the volume further discusses humour in regard to different cultural and political contexts, humour over the lifespan, in therapy and counselling, in pedagogical settings, in medicine and the workspace. The contributions also highlight the connections between humour and the COVID-19 pandemic and promise new inspiring insights. Researchers, practitioners and students in the fields of industrial and organisational psychology, positive psychology, organisational studies, future studies, health and occupational science and therapy, emotion sciences, management, leadership and human resource management will find the contributions highly topical, insightful and applicable to practice.
