In this revised second edition Dr Killen continues his survey of Egyptian furniture-making techniques with a study of boxes, chests and footstools and traces their evolution from the earliest times. Wooden, papyrus and alabaster boxes and chests were used to hold, protect and store valuable objects, toilet utensils, instruments, tools, garments, curtains, game pieces and papyri amongst other things. Those from the Old Kingdom usually had flat lids and solid board sides, tied together at the corners. During later periods carcass construction became so sophisticated, with the introduction of frame and panel work, that it was possible to construct barrel, shrine and pent-shaped lids. Later chests were elaborately painted, some with funerary scenes, painted with hieroglyphs or had gilt fretwork decoration applied to the sides and lid. This book is copiously illustrated with drawings and photographs and contains a catalogue of additional known pieces of Egyptian furniture preserved in museum collections.

In this third volume Dr Killen investigates how woodworking in ancient Egypt developed in the 19th and 20th dynasties. It

Access Free Cairo Egyptian Museum Griffith Ox

establishes the range of wooden furniture manufactured during this period by surveying examples depicted in Ramesside Theban and Memphite tombs. Ancient records show how the procurement of furniture occurred at Deir el-Medina while the design and manufacturing of these furniture forms can be traced through a series of furniture sketches that are annotated with a range of marks and signs. These designs are seen in surviving examples of furniture from settlements such as Medinet el-Gurob. To facilitate the manufacture of furniture, procedures were developed that were managed by cooperatives of Egyptian artisans. These groups established a recognisable Egyptian furniture style that was employed throughout the Ramesside world.

Depictions of furniture used by the ruling Ramesside elite are examined including a remarkable collection of furniture used by Rameses III, illustrations of which could once be found in a painted wall scene in his tomb (KV11) and still seen carved on the walls of his temple at Medinet Habu. These illustrations show how royal furniture was used as a symbolic tool to promote the Ramesside Empire at the edges of its sphere of influence. Temple furniture was also used to serve a religious purpose in the rituals performed by Ramesside priests, these forms are also analysed in this volume. This third volume contains a catalogue of known Egyptian furniture preserved in world museums that augments those catalogues found in the first two volumes of this series. The author also provides a distribution list with illustrations of a number of replica pieces of woodwork made by him that can now be found preserved in several museums and collections. The purpose of these replica pieces has been to analyse the design and construction techniques used by Egyptian carpenters using a range of replica woodworking tools.

Wine is a beverage that belongs to the Mediterranean culture.

Access Free Cairo Egyptian Museum Griffith Ox

A study of the origins of wine shows how deep vineyards are rooted in this area from West to East and since antiquity. The oldest and most extensive documentation about viticulture and winemaking comes from Egypt. Vineyards have been grown in the Nile Delta for five thousand years. The historical and archaeological study of documents and paintings related to winemaking coming from walls of Egyptian tombs, still presents nowadays unknown aspects. Thanks to the development of analytical techniques, we are now able to shed light on a new aspect known to us from the first Mediterranean civilization: the wine culture in Egypt. This present study has three objectives: To provide a bibliographical study of viticulture and oenology in ancient Egypt; to verify, in an analytical way, the presence of wine in amphorae of ancient Egypt; and to investigate what kinds of wine were produced in ancient Egypt.

The present work is the result of the First International Chariot Conference, jointly organised by the Netherlands-Flemish Institute in Cairo (NVIC) and the American University in Cairo (AUC) (30 November to 2 December 2012). The intention of the conference was to make a broad assessment of the current state of knowledge about chariots in Egypt and the Near East, and to provide a forum for discussion. A wide variety of papers are included, ranging from overviews to more detailed studies focusing on a specific topic. These include philology, iconography, archaeology, engineering, history, and conservation. The book is of interest to scholars as well as anyone with an interest in ancient technology, transportation, or warfare.

First runner-up for the British-Kuwait Friendship Society Book Prize in Middle Eastern Studies 2015. In ancient Egypt, wrapping sacred objects, including mummified bodies, in

Access Free Cairo Egyptian Museum Griffith Ox

layers of cloth was a ritual that lay at the core of Egyptian society. Yet in the modern world, attention has focused instead on unwrapping all the careful arrangements of linen textiles the Egyptians had put in place. This book breaks new ground by looking at the significance of textile wrappings in ancient Egypt, and at how their unwrapping has shaped the way we think about the Egyptian past. Wrapping mummified bodies and divine statues in linen reflected the cultural values attached to this textile, with implications for understanding gender, materiality and hierarchy in Egyptian society. Unwrapping mummies and statues similarly reflects the values attached to Egyptian antiquities in the West, where the colonial legacies of archaeology, Egyptology and racial science still influence how Egypt appears in museums and the press. From the tomb of Tutankhamun to the Arab Spring, Unwrapping Ancient Egypt raises critical questions about the deep-seated fascination with this culture – and what that fascination says about our own.

Ancient Egypt has always been a source of fascination to writers, artists and architects in the West. This book is the first study to address representations of Ancient Egypt in the modern imagination, breaking down conventional disciplinary boundaries between fields such as History, Classics, Art History, Fashion, Film, Archaeology, Egyptology, and Literature to further a nuanced understanding of ancient Egypt in cultures stretching from the eighteenth century to the present day, emphasising how some of the various meanings of ancient Egypt to modern people have traversed time and media. Divided into three themes, the chapters scrutinise different aspects of the use of ancient Egypt in a variety of media, looking in particular at the ways in which Egyptology as a discipline has influenced representations of Egypt, ancient Egypt's associations with death and mysticism, as

Access Free Cairo Egyptian Museum Griffith Ox

well as connections between ancient Egypt and gendered power. The diversity of this study aims to emphasise both the multiplicity and the patterning of popular responses to ancient Egypt, as well as the longevity of this phenomenon and its relevance today.

In this revised second edition Dr Killen continues his survey of Egyptian furniture-making techniques with a study of boxes, chests and footstools and traces their evolution from the earliest times. Wooden, papyrus and alabaster boxes and chests were used to hold, protect and store valuable objects, toilet utensils, instruments, tools, garments, curtains, game pieces and papyri amongst other things. Those from the Old Kingdom usually had flat lids and solid board sides, tied together at the corners. During later periods carcass construction became so sophisticated, with the introduction of frame and panel work, that it was possible to construct barrel, shrine and pent-shaped lids. Later chests were elaborately painted, some with funerary scenes, painted with hieroglyphs or had gilt fretwork decoration applied to the sides and lid. This book is copiously illustrated with drawings and photographs and contains a catalogue of additional known pieces of Egyptian furniture preserved in museum collections.

According to Egyptian mythology, when the ancient Egyptian sun god Re cried, his tears turned into honey bees upon touching the ground. For this reason, the honey bee was sacrosanct in ancient Egyptian culture. From the art depicting bees on temple walls to the usage of beeswax as a healing ointment, the honey bee was a pervasive cultural motif in ancient Egypt because of its connection to the sun god Re. Gene Kritsky delivers a concise introduction of the relationship between the honey bee and ancient Egyptian culture, through the lenses of linguistics, archeology, religion,

Access Free Cairo Egyptian Museum Griffith Ox

health, and economics. Kritsky delves into ancient Egypt's multifaceted society, and traces the importance of the honey bee in everything from death rituals to trade. In doing so, Kritsky brings new evidence to light of how advanced and fascinating the ancient Egyptians were. This richly illustrated work appeals to a broad range of interests. For archeology lovers, Kritsky delves into the archeological evidence of Egyptian beekeeping and discusses newly discovered tombs, as well as evidence of manmade hives. Linguists will be fascinated by Kritsky's discussion of the first documented written evidence of the honeybee hieroglyph. And anyone interested in ancient Egypt or ancient cultures in general will be intrigued by Kritsky's treatment of the first documented beekeepers. This book provides a unique social commentary of a community so far removed from modern humans chronologically speaking, and yet so fascinating because of the stunning advances their society made. Beekeeping is the latest evidence of how ahead of their times the Egyptians were, and the ensuing narrative is as captivating as every other aspect of ancient Egyptian culture.

The Egyptian Collection at Norwich Castle Museum represents the first full publication of this important collection which contains several outstanding objects. Part 1 begins with an outline of the acquisition history of the Egyptian collection and its display within Norwich Castle in 1894, when it was converted from a prison to a museum. The collection was largely acquired between the nineteenth and first part of the twentieth centuries. Its most prominent donor was Flaxman Spurrell, whose varied collection of flints, faience beads and necklaces as well as Late Antique cloths was obtained from Sir Flinders Petrie. Also prominent was the Norwich-based Colman family, most notable for its manufacture of mustard, whose collection was purchased in

Access Free Cairo Egyptian Museum Griffith Ox

Egypt during the late-C19. Also included in this part are essays on several of the museum's outstanding items – Ipu's shroud, a rare early 18th Dynasty example with fragments also held in Cairo; the 22nd Dynasty finely decorated and well-preserved cartonnage and wooden lid of the priest, Ankh-hor; and the exceptional model granary of Nile clay painted with lively scenes, one showing the owner, Intef, playing senet. Part 2 is a detailed catalogue of the complete collection. It is organised into sections with objects grouped together mainly according to type – stelae, shabtis, scarabs, jewellery, amulets, vessels, flints, lamps, inscribed Book of the Dead fragments, metal figurines, and Late Antique cloths; and also according to function – such as cosmetics & grooming, and architectural & furniture elements. The inscribed materials have all been translated and individual entries give examples or parallels. Seventy colour plates illustrate each object.
