In 2007 English Heritage commissioned initial research into links with transatlantic slavery or its abolition amongst families who owned properties now in its care. This was part of the commitment by English Heritage to commemorate the bicentenary of the abolition of the British transatlantic slave trade with work that would make a real difference to our understanding of the historic environment in the longer term. The research findings and those of other

scholars and heritage practitioners were presented at the 'Slavery and the British Country House' conference which brought together academics, heritage professionals, country house owners and community researchers from across Britain to explore how country houses might be reconsidered in the light of their slavery linkages and how such links have been and might be presented to visitors. Since then the conference papers have been updated and reworked into a cutting edge volume which represents the most current and comprehensive consideration of slavery and

Intended to provide a balanced and inclusive treatment of the ancient world, contributors consider scientific, medical and mathematical learning in the cultures associated with the ancient world.

In this classic collection, some of the world's most eminent critics of development review the key concepts of the development discourse. Each essay examines one concept from a

historical and anthropological point of view, highlights its particular bias, and exposes its historical obsolescence and intellectual sterility.

The authors argue that a bidding farewell to the whole Eurocentric development idea is urgently needed, in order to liberate people's minds in both North and South for bold responses to the environmental and ethical challenges now confronting humanity. The combined result forms a must-read invitation to experts, grassroots movements and students of development to recognize the tainted glasses they put on whenever

they participate in the development discourse.

The development of science in the modern world is often held to depend on such institutions as universities, peer-reviewed journals, and democracy. How, then, did new science emerge in the pre-modern culture of the Hellenistic Egyptian monarchy? Berrey argues that the court society formed around the Ptolemaic pharaohs Ptolemy III and IV (reigned successively 246–205/4 BCE) provided an audience for cross-disciplinary, learned knowledge, as physicians, mathematicians, and

mechanicians clothed themselves in the virtues of courtiers attendant on the kings. The multicultural Greco-Egyptian court society prized entertainment that drew on earlier literature, mixed genres and cultures, and highlighted motion and sound. New cross-disciplinary science in the Hellenistic period gained its social currency and subsequent scientific success through its entertainment value as court science. Ancient court science sheds light on the long history of scientific interdisciplinarity.

Dahlias are the showgirls of the garden. A favorite of floral and landscape designers, they come in a wide range of jewel-like colors—rich reds and vibrant oranges, shocking pinks—and an engaging variation of form and petal shape. The Plant Lover's Guide to Dahlias is packed with everything you need to know to grow these fantastic flowers including tips on using dahlias in garden design, growth and propagation information, and lists of where to buy the plants and where to view them in public gardens. The bulk of the book is devoted

The standard view in scholarship is that disease in Lucretius' *De rerum natura* is mainly a problem to be solved and then dispensed with. However, a closer reading suggests that things are more layered and complex than they appear at first sight: just as *morbis* causes a radical rearrangement of atoms in the body and makes the patient engage with alternative and up to that

point unknown dimensions of the sensible world, so does disease as a theme generate a multiplicity of meanings in the text. The present book argues for a reconsideration of morbus in De rerum natura along those lines: it invites the reader to revisit the topic of disease and reflect on the various, and often contrasting, discourses that unfold around it. More specifically, it illustrates how, apart from calling for therapy, disease, due to its dominant presence in the narrative, transforms at the same time into a concept that is integral both to the poem's philosophical agenda

but also to its wider aesthetic concerns as a literary product. The book thus sheds new light on De rerum natura's intense preoccupation with morbus by showing how disease is not exclusively conceived by Lucretius as a blind, obliterating force but is crucially linked to life and meaning—both inside and outside the text.
