Canary breeders often keep their birds outside year round in milder climates such as California and Arizona. In areas where it gets well below freezing, they are often kept in unheated basements or garages. The main limitation is that their drinking water not freeze, the birds themselves will survive freezing temperatures.

Canary Temperature Requirements
Your canary should be kept in a room with plenty of natural light. Do not place cage near a window where he may get a cold draft. Since a male canary's singing is stimulated by people movements, keep your canary in a room you occupy frequently.

Canaries have high body temperatures naturally because of fast metabolism. They fluff out their feathers to retain heat. A healthy canary will occasionally fluff his feathers, but a sick or dying canary always appears puffy. When he stops eating, he loses weight rapidly -- even healthy specimens don't typically have much body fat.

As a boy, I kept Zebra Finches and Border Canaries but after a break from bird-keeping of almost 25 years, I came back to this wonderful hobby in 1998. It was a visit to the National Exhibition in 1997 that inspired my fascination with the Crested Canary; this was the breed I was going to keep. You can get to know more about me here.

Breeding Canaries In An Aviary Crested Canary
Canaries are surprisingly confident cage birds considering their small stature. They may be kept safely with a range of other friendly birds, especially in aviary surroundings. Canaries can mix well with budgie or cockatiels for example.
