2. Capital controls in Brazil. Controls on capital outflows have a long history in Brazil, since financial repression was the norm until the early 1990s. In 1991, real interest rates were significantly raised to avoid capital flight and to help accumulate foreign reserves. With the low rates prevailing in the US, capital started flowing in the country.

~~Capital controls in Brazil: Effective? – ScienceDirect~~

In the Brazilian context, Cardoso and Goldfajn (1997) show the capital controls were only effective in restricting financial inflows to Brazil in the 1990s for two to six months.

~~Capital Controls in Brazil: Effective?~~

In the Brazilian context, Cardoso and Goldfajn (1997) show the capital controls were only effective in restricting financial inflows to Brazil in the 1990s for two to six months.

~~CAPITAL CONTROLS IN BRAZIL: EFFECTIVE~~

We analyze the impact of the controls and restrictions on capital inflows that Brazil has adopted since late 2009. We document that these measures had some success in segmenting the Brazilian and global financial markets, as measured by wedges between onshore and offshore prices of similar fixed and variable income assets. However, that failed to translate into significant changes in the ...

unprecedented context to study capital controls. Never before, has a country as open as contemporary Brazil so actively experimented with capital controls/restrictions. Sophisticated capital market, with deep and liquid instruments to gauge effectiveness of capital controls in segmenting domestic and external markets.

~~CAPITAL CONTROLS IN BRAZIL: EFFECTIVE?~~

No emerging market experimented as actively with controls on capital inflows as Brazil did since late 2009. This paper analyzes the impact of those measures. These policies had some success in segmenting the Brazilian from global financial markets, as measured by the spread between onshore and offshore dollar interest rates, as well as ADR premia relative to the underlying local stocks.

~~Capital controls in Brazil: Effective?~~

Laura Alfaro, Anusha Chari, Fabio Kanczuk 22 January 2015. Capital controls are back in fashion. This column discusses new firm-level evidence from Brazil showing that capital controls segment international financial markets, reduce external financing, and lower firm-level investment. They disproportionately affect small, non-exporting firms, especially those more dependent on external finance.

~~Capital control effectiveness: Firm-level evidence from~~

We analyze the impact of the controls and restrictions on capital inflows that Brazil has adopted since late 2009. We document that these measures had some success in segmenting the Brazilian and global financial markets, as measured by wedges between onshore and offshore prices of similar fixed and variable income assets.

~~Capital controls in Brazil – effective? – EconBiz~~

Abstract We analyze the impact of the controls and restrictions on capital inflows that Brazil has adopted since late 2009. We document that these measures had some success in segmenting the Brazilian and global financial markets, as measured by wedges between onshore and offshore prices of similar fixed and variable income assets.

~~Capital controls in Brazil: effective?~~

Capital controls as a signal After controlling for the counterfactual – that is, Brazil with no capital account policy change – for each event in which Brazil modified its capital controls during the first three years of the global financial crisis, we find no evidence that tightening of controls was effective in reducing the magnitudes of capital inflows into the country.

~~How effective were the 2008-2011 capital controls in Brazil?~~

There is no evidence to show that a tightening of capital controls was effective in decreasing the scale of inflows into Brazil. Meanwhile, there is support for the conclusion that Brazil was moderately successful in avoiding additional drops in inflows when the country lifted its capital controls (Jinjarak, Noy, and Zheng, 2013, p. 14).

~~Capital Controls in Emerging Market Economies: Comparing~~

Capital controls are residency-based measures such as transaction taxes, other limits, or outright prohibitions that a nation's government can use to regulate flows from capital markets into and out of the country's capital account. These measures may be economy-wide, sector-specific, or industry specific. They may apply to all flows, or may differentiate by type or duration of the flow. Types of capital control include exchange controls that prevent or limit the buying and selling of a national

~~Capital Controls In Brazil Effective Imf~~

Capital Controls and Implications for Surveillance and Coordination: Brazil and Latin America. From 2009 until 2011, Brazil utilized capital controls to deter real exchange rate appreciation. These measures may have obstructed necessary changes in the fiscal policy stance from occurring. In Chile, which employed capital controls heavily in the 1990s and then decided not to use them again during the commodity super-boom in the 2000s, suggests that an adequate fiscal policy stance provides ...

~~Capital Controls and Implications for Surveillance and~~

Using the synthetic control method, we construct counterfactuals (i.e., Brazil with no policy change) for each of these changes. We find no evidence that any tightening of controls was effective in reducing the magnitudes of capital inflows, but we observe some modest and short-lived success in preventing further declines in inflows when the capital controls were relaxed.

~~Capital Controls in Brazil: Stemming a Tide with a Signal~~

We collected several examples of the financial strategies engineered to avoid the capital controls and invest in the Brazilian fixed income market. The main conclusion is that controls on capital inflows, while they may be desirable, are of very limited effectiveness under sophisticated financial markets.

~~Ineffective Controls on Capital Inflows Under~~

Exporting firms may also be affected positively by capital controls if the controls lead to a depreciation of the Brazilian real, which in turn would make Brazilian exports more competitive. Finally, the market value and investment of external finance-dependent firms was negatively impacted by the controls.
