The Origin of Species Summary and Analysis of Chapter 5- Laws of Variation In this chapter Darwin discusses how variations occur in species. He admits that earlier in the book he has attributed this to chance but that this is not true. He attributes variation to the conditions that species have been exposed to under several successive generations.

The Origin of Species Chapter 5- Laws of Variation Summary ...  
Darwin said that some are born with long necks that would spread through the population. Eventually, a new species, with long necks evolved. Lamarck's idea was that each would have to undergo separate, internal change. Darwin's theory says that within a population, changes occur as the balance of new inherited traits spread across the population.
