Chapter 6 Remote Sensing Applications in Marine Aquaculture
Chapter 6: Selecting Optimally Sustainable Sites 165 Since the late 1980s there has been an increased use of GIS in aquaculture site selection and suitability studies over a variety of spatial scales for both inland pond-based aquaculture (e.g. Meaden, 1987; Meaden and Kapetsky, 1991; Kapetsky, 1994;

Chapter 6 An Integrated GIS Approach for Sustainable ...
A number of factors must be considered when selecting a site. These factors should be included in a comprehensive site analysis. Kövári (1984) groups site selection factors into three broad categories: (1) ecological; (2) biological; and (3) economic and social. These and a fourth category, legal matters, are discussed in this chapter.

Site Selection for Aquaculture | SpringerLink
Reading this chapter 6 aquaculture site selection and marine spatial will present you more than people admire. It will lead to know more than the people staring at you. Even now, there are many sources to learning, reading a sticker album still becomes the first unorthodox as a great way. Why

---

Chapter 6 Aquaculture Site Selection And Marine Spatial
The most suitable pH of water for aquaculture farms is considered to lie in the range 6.7–8.6 and values above or below this inhibit growth and production, although the extent of their effect will depend on the species concerned and environmental conditions such as the concentration of carbon dioxide or the presence of heavy metals such as iron.
