Boyle s law worksheet answer key with work  
First of all, the Charles' law formula requires the absolute values of temperatures, so that we have to convert them into Kelvin:  
 $T_1 = 35^{\circ}\text{C} = 308.15 \text{ K}$ ,  $T_2 = 15^{\circ}\text{C} = 288.15 \text{ K}$ .  
Then we can apply the Charles' law equation in the form where the final volume is being evaluated:  $V_2 = V_1 / T_1 * T_2 = 2 \text{ l} / 308.15 \text{ K} * 288.15 \text{ K} = 1.8702 \text{ l}$ .
