The preparative columns have typically an ID of 1–2 cm and sample volumes up to 1 ml can be injected. The amount of stationary phase in partition chromatography (GLC) is 20–30% (w/w particle). Analytical packed columns have an ID of 2–4 mm, and the amount of stationary phase in GLC is 0.5–10% (w/w).

Chromatography: Basic Principles, Sample Preparations and Related Methods includes all recent technology advances and has core textbook features further improving the learning experience. Importantly, the text does not only cover all major modern chromatography technology (thin layer, gas, high pressure liquid, and supercritical fluid chromatography) but also related methods, in particular electrophoretic technologies.
