Community structure, abundance, and morphology | Request PDF

Null models addressing community-wide dispersions in morphology have produced equivocal results and may be based on assumptions that are too restrictive (e.g., competitive exclusion or displacement). If morphological distinctiveness allows species to escape competitive pressures and exhibit higher densities, then a positive relationship should exist between morphological dissimilarity and ...

LTER Community structure, abundance, and morphology

2.1. Surface salinity data. Surface salinity data were obtained from the Oceanographic database of the International Council for the Exploration of the Sea (2011). The data included surface salinity measurements from April to October, 2005 to 2010 from the water surface down to 5 m water depth.

Influence of surface salinity gradient on dinoflagellate ...

Ammonia-oxidizing microorganisms play an important role in the nitrification process. In this study, the abundance, diversity and community structure of ammonia-oxidizing archaea (AOA) and ammonia-oxidizing bacteria (AOB) in riparian sediment of Zhenjiang ancient canal were investigated using amoA gene

as a molecular biomarker. Clone libraries and qPCR (quantitative polymerase chain reaction)...

Diversity, abundance and community structure of ammonia ...

Zhou et al. (2015) found that NO₃⁻-N concentration was responsible for shaping community structure, and that high nitrogen concentrations (300 kg N ha⁻¹ y⁻¹) resulted in higher relative abundance of the classes Gammaproteobacteria and Sphingobacteria, whereas those of Pedosphaerae and Nitrospirae, surprisingly, were lower. 16S ribosomal RNA (rRNA) gene analysis showed that nitrogen fertilization had a significant impact on bacterial community composition, causing increases in the ...
