Here's a few tips to help you safeguard your systems against various types of malware: 1. Install Anti-Virus & Firewall Software: Anti-virus and firewall software will increase the security of your computers. Always look for anti-virus software that protects against viruses, Trojans, worms, adware, and spyware.

## ~~How Does Malware Impact Your Computer's Performance?~~

A trojan horse is a malicious software program that hides inside other programs. It enters a computer hidden inside a legitimate program, such as a screen saver. Then it puts code into the operating system that enables a hacker to access the infected computer. Trojan horses do not usually spread by themselves.
