Control System Problems: Formulas, Solutions, and Simulation Tools Next we apply transformations 1 and 3 to the loop that contains the transfer function as feedback and get the following block diagram:  $X(s) H_3(s)$  Similarly, by applying transforms 1 and 3 we obtain the simplified block diagram that represents the system's transfer function.  $X(s)$

Problems with Management Control Systems. Despite of the benefits, there are some issues with the implementation of management control system in an organization. They are: Magnitude of Change. Management control system

is designed to cope with changes of a limited magnitude. While designing the control system certain assumptions are made concerning the variables expected to change and the degree of change.

Solution. The system equations are  $m\ddot{y} + b\dot{y} + ky = u$ . The output variables for this system are  $y$ , and  $\dot{y}$ . Define state variables as  $x_1 = y$ ,  $x_2 = \dot{y}$ . Then we obtain the following equations:  $\dot{x}_1 = x_2$  Figure 3-54 Mechanical system. Hence, the state equation is Example Problems and Solutions

This may be a bulk solids or powder flow problem, and it can be caused by too much abrasion or improper system construction. Solution: Slower speeds, stronger system. This flow control solution can be implemented by either slowing down the product or reinforcing the system. Lower drive speed; Install larger feeder to slow materials
