For 1" to 1-1/2" housing, place the cartridge in the FCV housing and then place the housing on a solid surface. Use hammer to tap down the cartridge into the housing seat (approximately 3/4" travel). 2. Reinstall, or replace the clip ring in the housing grooves and reassemble the end pieces and O-rings.

### INSTALLATION & OPERATION INSTRUCTIONS FLOW CONTROL

The control valve should always be installed on a horizontal steam line, never vertically. A control valve in a vertical installation has no ability to eliminate the buildup of condensate prior to the inlet of the control valve. Condensate passing through the steam control valves always has negative effect on the valve life. 10.

### Control Station Piping Layout – The Piping Engineering World

Control Valves All control valve stations should be designed with the valve stem in the vertical upright position and a minimum of three diameters of straight pipe both upstream and downstream of the control valve, in order to reduce the turbulence entering and leaving the valve and to provide space for removal of the flange studs or bolts. Where applicable, this straight pipe will include the usual reduction in pipe size required to match the control valve size.
