In this remarkable volume covering diverse subjects, in a span of three decades, Kenneth R. Ross articulates his views on the meaning and practice of Christian mission and challenges the binary view of mission that prevailed before the 1950s. He further reflects on Scotland's experiences in the world-wide Christian mission and demonstrates the centrality of Africa in any discourse on Christianity. This volume is invaluable in its argument for a rethinking of Christian mission especially in relation to the West, which is now a new frontier for Christian mission. The book will be immensely beneficial to students of missiology and general readers who are interested in the subject of Christian Mission.

David Hurst has a unique knowledge of organizations—their function and their failure—both in theory and in practice. He has spent twenty-five years as an operating manager, often in crises and turnaround conditions, and is also a widely experienced consultant, teacher, and writer on business. This book is his innovative integration of management practice and theory, using a systems perspective and analogies drawn from nature to illustrate groundbreaking ideas and their practical application. It is designed for readers unfamiliar with sophisticated management concepts and for active practitioners seeking to advance their management and leadership skills. Hurst's objective is to help readers make meaning from their own management experience and education, and to encourage improvement in their practical judgment and wisdom. His approach takes an expansive view of organizations, connecting their development to humankind's evolutionary heritage and cultural history. It locates the origins of organizations in communities of trust and follows their development and maturation. He also crucially tracks the decline of organizations as they age and shows how their strengths become weaknesses in changing circumstances. Hurst's core argument is that the human mind is rational in an ecological, rather than a logical, sense. In other words, it has evolved to extract cues to action from the specific situations in which it finds itself. Therefore contexts matter, and Hurst shows how passion, reason, and power can be used to change and sustain organizations for good and ill. The result is an inspirational synthesis of management theory and practice that will resonate with every reader's experience.

Discover the cognitive tools that lead to creative thinking and problem-solving with this "well-written and easy-to-follow" guide (Library Journal). Explore the "thinking tools" of extraordinary people, from Albert Einstein and Jane Goodall to Mozart and Virginia Woolf, and learn how you can practice the same imaginative skills to become your creative best. With engaging narratives and examples, Robert and Michèle Root-Bernstein investigate cognitive tools such as observing, recognizing patterns, modeling, playing, and more. Sparks of Genius is "a clever, detailed and demanding fitness program for the creative mind" and a groundbreaking guidebook for anyone interested in imaginative thinking, lifelong learning, and transdisciplinary education (Kirkus Reviews). "How different the painter at the easel and the physicist in the laboratory! Yet the Root-Bernsteins recognize the deep-down similarity of all creative thinking, whether in art or science. They demonstrate this similarity by comparing the accounts that various pioneers and inventors have left of their own creative processes: for Picasso just as for Einstein, for Klee just as for Feynman, the creative impulse always begins in vision, in emotion, in intuition. . . . With a lavishly illustrated chapter devoted to each tool, readers quickly realize just how far the imagination can stretch." —Booklist "A powerful book . . . Sparks of Genius presents radically different ways of approaching problems." —American Scientist

We live in an extraordinary time. In a world that moves faster than we can imagine, we cannot afford to stand still. In this extraordinary contrarian book Jeff Booth details the technological and economic realities shaping our present and our future, and the choices we face as we go forward—a potentially alarming, but deeply hopeful situation.

Creative Space summarizes and integrates the various up-to-date approaches of computational intelligence to knowledge and technology creation including the specific novel feature of utilizing the creative abilities of the human mind, such as tacit knowledge, emotions and instincts, and intuition. It analyzes several important approaches of this new paradigm such as the Shinayakana Systems Approach, the organizational knowledge creation theory, in particular SECI Spiral, and the Rational Theory of Intuition – resulting in the concept of Creative Space. This monograph presents and analyzes in detail this new concept together with its ontology – the list and meanings of the analyzed nodes of this space and of the character of transitions linking these nodes.

Why isn't the Law of Attraction working for most of people who try it? Why some people succeed, and some don't? Well perhaps because they have missed to incorporate the Critical Missing Factor and Model in LOA. This book is for you if you want to transform your life instantly with: ->the Critical MISSING SECRETS and MODEL ->key tools and techniques ->understand the proposed model (IUO Model) ->how to implement LOA using the Proposed IUO model ->Apply LOA tools and techniques to: -Attract love -Attract money -Attract health -Stop negative patterns -Delete negatives -Shift from negative to positive -Overcome anxiety ->many practical exercises and real success stories ->AND so much more... This book is a simple 'what and how to' guide for revealing
