Few books have ever made their presence felt on college campuses—and newspaper opinion pages—as quickly and thoroughly as Richard Arum and Josipa Roksa's 2011 landmark study of undergraduates' learning, socialization, and study habits, *Academically Adrift: Limited Learning on College Campuses*. From the moment it was published, one thing was clear: no university could afford to ignore its well-

documented and disturbing findings about the failings of undergraduate education. Now Arum and Roksa are back, and their new book follows the same cohort of undergraduates through the rest of their college careers and out into the working world. Built on interviews and detailed surveys of almost a thousand recent college graduates from a diverse range of colleges and universities, *Aspiring Adults Adrift* reveals a generation facing a difficult transition to adulthood. Recent graduates report trouble finding decent jobs and developing stable romantic relationships, as well as assuming civic and financial responsibility—yet at the same time, they remain surprisingly hopeful and upbeat about their prospects. Analyzing these findings in light of students' performance on standardized tests of general collegiate skills, selectivity of institutions attended, and choice of major, Arum and Roksa not only map out the current state of a generation too often adrift, but enable us to examine the relationship between college experiences and tentative transitions to adulthood. Sure to be widely discussed, *Aspiring Adults Adrift* will compel us once again to re-examine the aims, approaches, and achievements of higher education.

The *Handbook of Computational Social Science* is a comprehensive reference source for scholars across multiple disciplines. It outlines key debates in the field, showcasing novel statistical modeling and machine learning methods, and draws from specific case studies to demonstrate the opportunities and challenges in CSS approaches. The *Handbook* is divided into two volumes written by outstanding, internationally renowned scholars in the field. This first volume focuses on the scope of computational social science, ethics, and case studies. It covers a range of key issues, including open science, formal modeling, and the social and behavioral sciences. This volume explores major debates, introduces digital trace data, reviews the changing survey landscape, and presents novel examples of computational social science research on sensing social interaction, social robots, bots, sentiment, manipulation, and extremism in social media. The volume not only makes major contributions to the consolidation of this growing research field but also encourages growth in new directions. With its broad coverage of perspectives (theoretical, methodological, computational), international scope, and interdisciplinary approach, this important resource is integral reading for advanced undergraduates, postgraduates, and researchers engaging with computational methods across the social sciences, as well as those within the scientific and engineering sectors.

Explores CSS tasks and discusses such topics as creating usable Web designs, controlling typography, and choosing appearance-enhancing colors and backgrounds.

*Gravity's Ghost and Big Dog* brings to life science's efforts to detect cosmic gravitational waves. These ripples in space-time are predicted by general relativity, and their discovery will not only demonstrate the truth of Einstein's theories but also transform astronomy. Although no gravitational wave has ever been directly detected, the previous five years have been an especially exciting period in the field. Here sociologist Harry Collins offers readers an unprecedented view of gravitational wave research and explains what it means for an analyst to do work of this kind. Collins was embedded with the gravitational wave physicists as they confronted two possible discoveries—*Big Dog*, fully analyzed in this volume for the first time, and the *Equinox Event*, which was first chronicled by Collins in *Gravity's Ghost*. Collins records the agonizing arguments that arose as the scientists worked out what they had seen and how to present it to the world, along the way demonstrating how even the most statistical of sciences rest on social and philosophical choices. *Gravity's Ghost and Big Dog* draws on nearly fifty years of fieldwork observing scientists at the American Laser Interferometer Gravitational Wave Observatory and elsewhere around the world to offer an inspired commentary on the place of science in society today.

*Sociology of Health*, contains empirical and theoretical articles that apply sociological concepts and methods to the understanding of health and illness and the organization of medicine and healthcare. Further the articles also try to explore the understanding of the process by which social practices and human health are related.

"A complete learning experience for creating industry standard Web pages - but you won't be just reading: you'll be playing games, solving puzzles, pondering mysteries and creating Web pages like you never imagined. You'll be also learning how HTML works with CSS . . . if you're going to create Web pages in the 21st century, then you want to know and to understand CSS, too."

Cascading Style Sheets (CSS) is a method of describing how a Web page should look in a Web browser, but a growing number of browsers do not support CSS in the same way, forcing developers to constantly play catch-up to keep their sites consistent. Bestselling author Joe Lowery eases the pain for those Web developers who aren't feeling the CSS love—he guides readers through real-world workarounds that will help a CSS-based site look and work the way it was meant to. Readers will grit their teeth, clench their fists, and roll their eyes for the last time once they learn how to craft fluid multi-column layouts, build interactive navigation, fix the Box Model, implement CSS hacks in Dreamweaver, and more cool tricks.

Online research methods are popular, dynamic and fast-changing. Following on from the great success of the first edition, published in 2008, *The SAGE Handbook of Online Research Methods, Second Edition* offers both updates of existing subject areas and new chapters covering more recent developments, such as social media, big data, data visualization and CAQDAS. Bringing together the leading names in both qualitative and quantitative online research, this new edition is organised into nine sections: 1. Online Research Methods 2. Designing Online Research 3. Online Data Capture and Data Collection 4. The Online Survey 5. Digital Quantitative Analysis 6. Digital Text Analysis 7. Virtual Ethnography 8. Online Secondary Analysis: Resources and Methods 9. The Future of Online Social Research. *The SAGE Handbook of Online Research Methods, Second Edition* is an essential resource for anyone interested in the contemporary practice of computer-mediated research and scholarship.

"The Confederate cruiser *Shenandoah* was the last of a group of commerce raiders deployed to prey on Union merchant ships. Ordered to the Pacific Ocean to "greatly damage and disperse" the Yankee whaling fleet in those waters, the *Shenandoah's* successful pursuit of her quarry compares favorably with the exploits of the more celebrated *Alabama* and *Florida* but has never been as well known because it coincided with the war's end. It was, however, one of the best documented naval expeditions - from England to the Indian Ocean, Australia and the South Pacific, the Bering Sea, San Francisco, and finally to port in Liverpool - during the Civil War."--BOOK JACKET.
