## Cultural Selection

Cultural selection theory is the study of cultural change modelled on theories of evolutionary biology. Cultural selection theory has so far never been a separate discipline. However it has been proposed that human culture exhibits key Darwinian evolutionary properties, and "the structure of a science of cultural evolution should share fundamental features with the structure of the science of biological

Cultural Selection: Traditional Knowledge and Skills in Yurt Making and Decorative Textiles. The culture and trade wares of nomadic people served as important intermediaries between the diverse cultures and people of the Silk Roads. Thanks to exchanges occurring across Central Asia in what is today Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan, Uzbekistan, and Mongolia, nomads became important actors of interactions and mutual influences along the Silk Roads and left a remarkable legacy.

by Darwinian selection. The paradigm of cultural selection is broader than the paradigm of memetics, because the latter sees cultural evolution as a selection of information units called memes, analogous to genes, while cultural selection theory includes selection processes that can not adequately be explained in terms of ...

---

Agner Fog: Cultural selection  
Cultural patterns of transmission, innovation, random fluctuations, and selection are conceptually analogous to genetic processes of transmission, mutation, drift, and selection, and many of the mathematical techniques used to study genetics can be useful in the study of culture (1, 12). However, these mathematical approaches had to be modified to account for the differences between genetic and cultural transmission.

Cultural evolution is the change of culture over time. If we define culture as "information capable of affecting individuals' behavior that they acquire from other members of their species through teaching, imitation and other forms of social transmission," cultural evolution is fundamentally just the change of culture over time.
