Although the effect of trade on employment is a popular point of economic debate, there are very few factual assessments available. This book examines the most recent evidence and provides guidance for the design of tools to assess more accurately the employment impacts of trade. Trade and Employment argues for strengthening the micro-foundations of models used to evaluate the employment effects of trade and for including the informal economy and adjustment processes in modeling efforts. It emphasizes the role of governments in helping firms survive or grow, in providing social protection to protect against external shocks, in addressing gender equity, and in building physical infrastructure and human skills bases that facilitate export diversification. It is a valuable resource for all those interested in the debate on the employment effects of trade: workers and employers, academics and policymakers, and trade and labor specialists.

Twelve Years a Slave (1853) is a memoir and slave narrative by Solomon Northup, as told to and edited by David Wilson. Northup, a black man who was born free in New York, details his kidnapping in Washington, D.C. and subsequent sale into slavery. After having been kept in bondage for 12 years in Louisiana by various masters, Northup was able to write to friends and family in New York, who were in turn able to secure his release. Northup's account provides extensive details on the slave markets in Washington, D.C. and New Orleans and describes at length cotton and sugar cultivation on major plantations in Louisiana.

This book is designed for both the business world and the classroom. A separate Instructor's Manual has been prepared and may be requested on school letterhead from Chapman & Hall. International Logistics 1 Introduction This book is about international logistics and the international logistics system. International means that it will deal with transactions involving indi viduals or firms in more than one nation. Logistics means the organized movement of goods, ser vices, and, sometimes, people. Communications are important, and a logistics system in cludes whatever communication capability it needs.
