Dairy Cattle

Supplements are often used for pasture-based nutritional systems, as are fat and alternative forage supplements.

Adequate intake of clean water is just as important as feeding for healthy cattle and milk production.

Today's Dairy Cow.

The dairy cow is a marvel as a biological manufacturing plant.

The "average" New York dairy cow produced 20,071 lbs. of milk per lactation in 2009. The "average" New York dairy cow produced 10,885 lbs. of milk per lactation in 1970. This is an 84% increase!

Dairy Cattle

Feeding And Nutrition
Cows, we need to look at different aspects.

Are the cows getting enough nutrients to support their milk production? Cows which are underfed protein and/or energy produce less milk.

When protein is added to the diet, milk production responds within a week.
