If still no drop, problem is sticking or maladjusted spool valve. Remove valve chest from tractor, remove the two seven-sixteenth spool locknuts, tap out seized spool, lubricate and reset as per etched figure on spool base. Refit to tractor. Mechanical. Ensure lift latch is fully disengaged. If not, problem solved; if it is, go to 2.

The hydraulic pump runs constantly when the engine is running. When the pump is maxed out on pressure, you can hear it and the engine labours a bit. This isn't good for the pump. Is there enough oil in the back end? When was the hydraulic oil filter changed last? On my DB995 you have to take off a sump plate to get at it.

I've been pleasantly surprised by the helpful responses posted to my recent questions about issues with my sickly IH 674, so, I thought I'd throw another question out there! I'm wanting to replace the 674 with something smaller, and I'm thinking about a David Brown. From childhood memories of messing about with 25 & 30d tractors, the newer machines seem quite similar.

### Which David Brown? - The Farming Forum

David Brown was purchased in 1976 by the same parent company that owned J. I. Case. The best tractors of each brand were retained in the merger, and the 990 Selectamatic was a clear keeper. The paint scheme was updated, and the tractor was produced with two different sets of decals depending on the market – either a Case 990 or a David Brown 990 Selectamatic.

Midlands, welcome to the world of david brown hydraulics – sounds as if theres a stuck valve somewhere- the knob to the right of the seat near the diff lock pedal controls the speed of drop of the hydraulic arms- the hydraulic pump is located in the rear of the tractor- you'll need to remove the pto housing and its right in front of you (if a long shaft comes out along with housing shove it back in when you draw the housing off far enough to grab it )

Re: david brown 1494 hydraulic problems Big smiles all round that it was a cheap fix, filters are the cheapest parts you can ever buy.Another piece of information to consider is that there three separate oil supplies in the backend of a 1494.The main one that you drained and then two smaller ones in each of the reduction hubs.
