Safety-critical software systems are developed within a risk-based framework: the regulatory framework requires the assessment and mitigation of all reasonably foreseeable risks prior to placing the products on the market. A risk assessment includes the determination of key hazards, risks, failure modes, and mitigations, for software where the device risks have to be linked to software items.

Safety-Critical Software Development: DO-178B

Software engineering for safety-critical systems. Software engineering for safety-critical systems is particularly difficult. There are three aspects which can be applied to aid the engineering software for life-critical systems. First is process engineering and management. Secondly, selecting the appropriate tools and environment for the system.
