Direct variation problems are solved using the equation  $y = kx$ . In this case, you should use  $c$  and  $d$  instead of  $x$  and  $y$  and notice how the word "square root" changes the equation. Step 2 : Use the information given in the problem to find the value of  $k$ .

### ~~Solving Direct Variation Problems~~

DIRECT VARIATION A linear equation of the form  $y=kx$  with  $k \neq 0$  is called direct variation. The variable  $y$  varies directly with the variable  $x$ . In other words, the variables change at the same rate: If the value of one variable doubles, the value of other variable doubles, if one value triples, the other triples.

### ~~Direct and Inverse Variation~~

Solution:  $y \propto x^3$  that is  $y = kx^3$  where  $k$  is a constant. Substitute  $x = 3$  and  $y = 21$  into the equation:  $21 = k(3^3) \Rightarrow k = \frac{21}{27}$ . So,  $y = \frac{7}{9}x^3$ . When  $x = 8$ , The following video gives some practical examples of direct variation and indirect/inverse variation. Show Video Lesson.
