OPS (Online Process Simulator) is a web-based discrete-event simulation (DES) engine for modeling process flows. OPS can be used to simulate simple queueing theory type systems to get insight into how variation will affect the value-added and non-value added time in the system. Descreye Solutions develops OPS along with other custom solutions for companies and organizations that need enhanced analytical capability.

in time and marks a change of state in the system. Between consecutive events, no change in the system is assumed to occur; thus the simulation time can directly jump to the occurrence time of the next event, which is called next-event time progression. In addition to next-event time progression, there is also an alternative approach, called fixed-increment time
