DOCSIS defines a CMTS-to-CM, PHY-to-PHY distance of 100 miles (160 km) for DOCSIS 3.0 and 50 miles (80 km) for DOCSIS 3.1. Remote PHY maintains these distances. Because Remote PHY separates the DOCSIS MAC and PHY, there is an additional distance specification. That is the MAC-to-MAC, CMTS Core to CM distance.

In fact, John Chapman, Cisco Fellow and Cable CTO, played a central role in the creation and ongoing development of the RPHY DOCSIS standard and invented the primary technologies that were the foundation for DOCSIS 3.0 and DOCSIS 3.1.

Advantage Remote PHY White Paper - Cisco

One of those technologies with lots of buzz right now is Remote PHY (RPHY). It is one of a few competing technologies that live in the arena of cable Distributed Access Architectures (DAA). At its most basic, root definition, RPHY takes the QAM modulation/demodulation portion of the CMTS and separates it to a location outside of the CMTS.

Putting the “ Why ” in Remote PHY - Cisco Blogs

All of the Remote Phy Devices Cisco is bringing to the market are full DOCSIS 3.1 hardware capable, offer low power consumption and are compliant to the Remote Phy specification. Remote Phy is the only distributed CCAP architecture that is CableLabs specified and as such an open standard.

After digitizing their access network with Remote PHY, cable operator Midco has taken the next step in their network transformation journey and begun virtualizing their headend functions. Using the Cisco Cloud Native Broadband Router (cnBR), Midco is harnessing the agility of DevOps and web-scale while reducing hardware, space, power, and maintenance requirements.

Cable Network Transformation - Cisco

The cable broadband access network is extremely complex. Hybrid fiber/coax (HFC), fiber-to-the-[feeder, building, curb, home, premises, tap], passive optical networks (PONs), digital video, DOCSIS®, remote PHY, quadrature amplitude modulation (QAM), orthogonal frequency division multiplexing (OFDM) – all of these technologies have their own technical information.
