'I immersed myself in magic. I read every book I could get my hands on and practised and practised, day after day and night after night. Magic became my world...some might say an obsession.' When his late granddad showed him magic for the first time, Steven Frayne knew there

was more to life than hiding from bullies. He had a destiny. A calling. In that moment Dynamo was born: the most exciting magician of the 21st century. Since then, Dynamo has shocked, thrilled and amazed men, women and children, from all walks of life, all over the world. With his mind-blowing illusions, he has catalysed a whole new era of magic. Now, in his very first book, Dynamo invites you to join him on a breathtaking journey across the globe. Be prepared to levitate Lindsay Lohan in Singapore, transform snow into diamonds in the Austrian mountains, and walk on water across the River Thames. Along the way, he reveals how to make the impossible possible, what it takes to pull off the greatest stunts man has seen, and why everyone needs magic in their lives. This is no illusion. This is Dynamo revealed.

Tackle the Challenges of Parallel Programming in the Visual Effects Industry In Multithreading for Visual Effects, developers from DreamWorks Animation, Pixar, Side Effects, Intel, and AMD share their successes and failures in the messy real-world application area of production software. They provide practical advice on multithreading techniques and visual effects used in popular visual effects libraries (such as Bullet, OpenVDB, and OpenSubdiv), one of the industry's leading visual effects packages (Houdini), and proprietary animation systems. This information is valuable not just to those in the visual effects arena, but also to developers of high performance software looking to increase performance of their code. Diverse Solutions to Solve Performance Problems After an introductory chapter, each subsequent chapter presents a case study that illustrates how the authors used multithreading techniques to achieve better performance. The authors discuss the problems that occurred and explain how they solved them. The case studies encompass solutions for shaving milliseconds, solutions for optimizing longer running tasks, multithreading techniques for modern CPU architectures,

and massive parallelism using GPUs. Some of the case studies include open source projects so you can try out these techniques for yourself and see how well they work.

Dee Brestin knows many women long for Bible studies that apply the Scriptures to a woman's heart and life! The letters of John have themes which are of particular interest to women: love, fellowship, confidence, hospitality, and helping our children walk in the truth. John's letters are timeless, and he tells us that our joy will be complete as our fellowship with Christ spreads to those around us (1 John 1:4). Women are like dominoes--our lives profoundly affect the direction of those in our circles of influence. As we experience greater fellowship with Jesus, those we love are motivated to begin maturing in their relationship with Him as well. This guide is one of a series by Dee especially for women. Dee Brestin ministers to the hearts of women with her speaking and writing. Besides this series of studies, she is the author of *The Friendship of Women*, *The Lifestyles of Christian Women*, *And Then We Were Women* (Victor), and eight *Fisherman Bible study guides* (Shaw). She and her husband Steve are the parents of five children and live in Kearney, Nebraska.

Profound distrust commonly characterizes not only the relationship between citizens and state institutions, but also social, as well as inter- and intra-state relations. This impacts the effectiveness and quality of the service provided by state institutions. The degree to which police and judicial reforms are able to generate trust on these fronts is therefore an important yardstick to judge their relevance under varying circumstances of 'post-authoritarian rule', but this question is largely ignored in the current literature on policing and reform. From this perspective, *Policing Insecurity: Police Reform, Security, and Human Rights in Latin America* suggests an agenda of future reforms for the region, drawing and

building upon policing reform experiences throughout the Latin America, looking at issues such as impunity, professionalization, community policing, as well as accountability and training of the police. By explicitly linking issues of state-social trust, democratic transition, human rights, and security, these case studies provide a basis for the wider discussion in the book about prerequisites for the success or failure of police reforms, thus adding to our empirical and theoretical knowledge in these areas and introducing an important dimension to the literature on police reform, security, and human rights.

Effective wire bending techniques that are customized to each individual patient make orthodontic treatment more efficient and can reduce treatment time. In lieu of overly complicated wire bending, the author of this manual promotes precise, intuitive bending and presents the proven methods that work with any biologically compatible wire. The essential components and techniques of customized wire bending are detailed step-by-step, including trimming of casts; selection and proper manipulation of pliers; the first-order bends (in or out), second-order bends (up or down), and third-order bends (torque); and optimal methods of adjustment to be used during orthodontic treatment. In addition, the author elucidates the "fourth-order bend," which is the understanding of how to use a wire effectively to apply orthodontic force to a patient over time. Technical images and case presentations illustrate each step of the process to ensure maximum comprehension. A must-have guide for orthodontic residents and practitioners alike.
