Plate Tectonics The Earth ' s lithosphere is broken into large pieces called tectonic plates. Convection currents in the partially molten asthenosphere move these plates across the surface of the Earth. Locations where one plate interacts with another are called plate boundaries.

Earth ' s internal thermal energy causing mantle to heat, expand, and rise. As it gets closer to crust it cools, becoming denser and sinking forming a current. The convection currents act as a " conveyor belt " moving the plates of the lithosphere above. The result of plates moving are earthquakes, volcanic eruptions, and building of mountains.
