This book presents the state of the art in research into atopic dermatitis, or atopic eczema, and provides

numerous effective practical management recommendations that are grounded in the immense clinical experience of the author. A scientific evidence-based approach to the subject is adopted, progressing from clinical symptoms in different disease stages, molecular genetics, and pathophysiology through to treatment and prevention. All aspects of patient management are covered, including diagnostics, avoidance strategies, emollient therapy, and acute treatment of eczema and itch. Diverse special therapeutic approaches are discussed, ranging from glucocorticoids, topical calcineurin inhibitors, and antimicrobial therapy through to UV therapy, allergen-specific immunotherapy, systemic immunosuppressive therapy, and emerging options. Environmental influences are considered, and there is a focus on the whole human being, with attention to psychosocial aspects of the disease and the benefit of educational programs such as "eczema schools". Atopic Dermatitis will be invaluable for dermatologists, allergists, pediatricians, and general practitioners and informative for other interested persons and sufferers.

OFTEN CALLED "the itchy rash," eczema is a skin disorder that typically surfaces in childhood and affects an estimated 10% of the world's population. Eczema or atopic dermatitis is a condition that usually arises to varying degrees of severity, often in the body. It is a result of inflammation in the body, so treating it that does not usually inflammation may help reduce symptoms. Many triggers may bring on eczema-related symptoms, including what you eat. There isn't a single diet that works for everyone, but a good rule of thumb is to avoid any food that may make your symptoms worse. Focus on a healthy diet filled with fresh fruits and vegetables, healthy fats, and lean proteins. There may be a link to food off limits - for example, all of your eggs, fish, or soy. Some foods may trigger the release of T cells that usually inflammation, as well as immunoglobulin-E or IgE, which is an antibody that the body produces in response to a trigger. Food that triggers but is usually nuts, milk, and wheat. Which is a trigger? It's not always a trigger for food, but you may find that these symptoms do get better when they make dietary changes. Making these changes and managing the results may help a person deal with the condition who has been struggling with it can help them better manage their condition.

relationship to filaggrin mutations was discovered a decade ago, research focus has been on the skin barrier, and numerous new publications have become available. This book is an interdisciplinary update offering a wide range of information on the subject. It covers new basic research on skin markers, including results on filaggrin and on methods for the assessment of the barrier function. Biological variation and aspects of skin barrier function restoration are discussed as well. Further sections are dedicated to clinical implications of skin barrier integrity, factors influencing the penetration of the skin, influence of wet work, and guidance for prevention and saving the barrier. Distinguished researchers have contributed to this book, providing a comprehensive and thorough overview of the skin barrier function. Researchers in the field, dermatologists, occupational physicians, and related industry will find this publication an essential source of information.
