EHRs are real-time, patient-centered records that make information available instantly and securely to authorized users. While an EHR does contain the medical and treatment histories of patients, an EHR system is built to go beyond standard clinical data collected in a provider's office and can be inclusive of a broader view of a patient's care.

Handbook for Electronic Health Records Implementation

A more general and contemporary term is "Electronic Health Records" (EHRs), which expands the scope of systems to include data relevant to both health and disease, and expands the sources of data beyond the records created by health professionals, to include the patient's own observations, and family history data generated by relatives.

last? Electronic health records

An electronic health record (EHR) is software that's used to securely document, store, retrieve, share, and analyze information about individual patient care. EHRs are hosted on computers either locally (in the practice office) or remotely. Remote EHR systems are described as "cloud-based" or "internet-based."
