I bought my 2003 120 1KZ-TE at 130000ks and it has now done 235000ks without an ounce of trouble except for a weep in the radiator. I treat it kindly and change the oil every 5000ks and the filter at 10000ks, I've towed a caravan to Perth and back as well as towing the van right up the beach on Fraser Island a couple of times.

The Toyota 3.0 D-4D engine can reach a 250,000 miles (400,000 km) mileage. The 1KD-FTV is not very durable and reliable compare to the old Toyota's diesel engines, but we can point out that the 1KD engine is more powerful and at the same time consumes less fuel than its predecessor, the 1KZ engine.

Turmoil bubbles up through the cracks of the Underwood as long forgotten travesties stir, seeking redemption. The newly awakened power of an Innocent has sent tremors through Goblin Park and dark places beyond, nudging awake creatures and beasts that would be best left asleep. Guilt awakens in those who misused their magic and circumstance forces them back onto a path they were trying to forget. They must dig up what they had buried and help the Innocent navigate a treacherous world of trickery and menace to find their absolution. The Innocent must overcome her own limitations and be old beyond her years to save her

own life and the legends that make Goblin Park and the Underwood worth saving. The Gypsy Winds blow, pulling those together again who must guide and teach the Innocent everything she must know to succeed. She must pilot her way through places like the Muddle, Watergate Wasteland and the Castle of Mirrors where things are never as they seem. In leaps and bounds she must make new unlikely friends at places like Mildew Manor and the Valley of Clay, for within the confines of those wicked places, where she faces death, she will find the answers that she needs to undo what the generation before could not fix.

This book describes new theories and applications of artificial neural networks, with a special focus on answering questions in neuroscience, biology and biophysics and cognitive research. It covers a wide range of methods and technologies, including deep neural networks, large scale neural models, brain computer interface, signal processing methods, as well as models of perception, studies on emotion recognition, self-organization and many more. The book includes both selected and invited papers presented at the XXI International Conference on Neuroinformatics, held on October 7-11, 2019, in Dolgoprudny, a town in Moscow region, Russia.

In the introductory and concluding chapters this book strive to satisfy the needs of the interested lay reader by addressing the potential, advantages, and costs of solar power plants. For the interested student, scientist, or technically oriented lay person the physical principles of insolation, its variability, concentration, and most efficient use are developed in some detail. Finally, experimental and theoretical developments in the recently created field of solar driven chemistry (via thermal, quantum, or electrical excitation) are described. The contributions in this book are written by leading solar scientists and engineering experts whose extensive background and experience in solar energy lend authenticity and completeness to the book. Design aspects of, and results from large experimental and demonstration plants are described by individuals who were directly involved in the design and testing of many of these plants. Consideration of the viability and future economics of large-scale solar power generation provides an outlook on the energy contributions which can be expected from an optional future supply of abundant and renewable energy, having little impact on the environment. This provides the rationale for the continued commitment to the development of solar power technologies by researchers, engineers, and industry. The eventual depletion of, or future political attacks on our energy supply will have less serious impact once this renewable option is in place.
